CENSUS OF BUSINESS

Fred A. Gosnell, Chief Statistician
William A. Ruff, Assistant

This is one of a series of six volumes, described on pages 3 and 4 hereof, presenting the results of the 1935 Census of Retail Distribution.

The facts were collected in 1936 by a complete field canvass of retail stores in every State, city and county in the United States, and they represent the operations of retailers during the year 1935.

Comparisons with 1933 and 1929 refer to previous business censuses conducted by the Bureau of the Census; i.e., the Census of American Business of 1933 and the Census of Distribution of 1929. The three enumerations provide the first factual appraisal ever available of the effect on retail distribution of a serious business depression and the early years of subsequent recovery.

Volume I is primarily a summary for the United States as a whole, by kinds of business, by types of operation and by States. Similar data for each State, and in many cases by counties and cities within the State, are presented in detail in Retail Volumes II to VI inclusive.

The Census of Business was made possible through an allocation of funds to the Bureau of the Census by the Works Progress Administration.

Retail reports are prepared under the supervision of John Guernsey, Distribution Economist for the Census Bureau, by Ira D. Anderson, Retail Assistant, Hugh Duffey, James O. Reid and Irwin Heine.

RETAIL DISTRIBUTION: 1935

ARRANGEMENT AND CONTENTS OF RETAIL VOLUMES

Vol. I - United States Summary. Contains national summaries, under various classifications, of the data presented in other volumes in detail; a general description of retail trade in 1935; comparisons with the previous Retail Censuses of 1933 and 1929; definitions of terms and classifications; and summaries of the Wholesale, Service and other Censuses which contain data directly related to retail census data.

It also contains new matter not treated in greater detail elsewhere, including a summary of the number and nature of stores operated by negro proprietors, and sample compilations of other data so limited in interest or so incomplete as to be excluded from detailed treatment in area volumes.

Vol. II - County and City Summaries. Contains (1) a summary of all types and kinds of retail business (combined) for each State, county, city and place of more than 2,500 population and remainder of each county; (2) a series of tables for each city of more than 50,000 population, by 54 kinds of business; (3) a series of tables for each city of 10,000 to 50,000 population, by 11 business groups; (4) analyses by size of city, for each State, of all stores and sales arranged in 11 business groups.

Vol. III - Kinds of Business, by Areas. Contains a series of tables showing stores and sales by kinds of business in each State, county, city and place of more than 2,500 population, and remainder of each county. For this purpose all kinds of business are included in 11 business groups and reported uniformly for each area. For greater detail the 11 groups are expanded in separate tables, for each State as a whole and for cities of more than 500,000 population, into 66 detailed business classifications.

Vol. IV - Types of Operation. Contains an analysis of stores, sales, personnel, pay rolls and operating expenses, by types of operation (independents, chains and other types), for each State as a whole and for each city of more than 500,000 population, for (1) all kinds of business combined and (2) 26 principal kinds of business separately.

Vol. V - Employment and Pay Roll. Contains monthly employment data by kinds of business, for States and for cities of more than 500,000 population; also data on rates of pay, sex and full-time versus part-time status, by functional classes of employment (executives, office workers, salespeople, etc.).

Vol. VI - Credit Sales, Stocks, Size of Business, and Other Data. Contains data on credit and instalment sales, value of merchandise stocks on hand at the end of the year, analyses by size of business, and analyses by sources of sales volume (whether sales of merchandise, meals and fountain, or repairs and services).

RETAIL DISTRIBUTION: 1935UNITED STATES SUMMARYVOLUME I - PART IIntroduction

This is a summary for the United States presenting the results of the third Retail Census. The first such Census was taken as part of the Census of Distribution of 1929. A summary for 1929, comparable to this, is contained in Distribution Volume I, Part 1, one of the reports of the Fifteenth Census of the United States.

The second Retail Census was taken as part of the Census of American Business of 1933, which included also a census of wholesale establishments and a census of service establishments, places of amusement and hotels. A retail summary for 1933, comparable to this, is contained in Retail Volume I of the 1933 Census of American Business.

This third Retail Census was taken as part of the Census of Business of 1935. The data, which represent the operations of retailers during the year 1935, were collected in 1936 by a complete field canvass of retail stores in every State, city and county in the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration.

Scope of the Retail Census

Retail distribution, as covered in this Census, is the process of purveying goods to ultimate consumers for consumption or utilization, together with services incidental to the sale of goods. The function of the retailer is primarily to anticipate the wants of the consumer and to make available, at the right time and at a convenient place, a reasonable selection of goods capable of satisfying those wants. The distinguishing characteristic of a retailer is that the business is done in a retail manner, in a place of business open to the public.

Retail and Wholesale

As in the 1933 Census the line of separation between retail and wholesale establishments was drawn at 50 percent. Only those stores whose sales at retail exceeded 50 percent of total sales were classified with retail establishments. The number of cases in which this rule had to be applied was, of course, small relative to the total number of establishments covered. Borderline cases of this type occur most frequently in the distribution of hardware, farm implements, building materials, coal, motor vehicles and gasoline. In the study of retail distribution in these several fields it is essential therefore to consider both the Wholesale and Retail Censuses. Similarly in comparing the 1935 data with 1933 it should be noted that for stores in these fields a relatively small change in sales at retail may cause a shift in classification from wholesale to retail or vice versa.

Tables 7A and 7B provide a measure of the volume of wholesale sales made by retail stores. Data on the amount of retail sales by wholesale establishments are presented in Tables 8A and 8B, which are summaries of more detailed information contained in Volume VII of the Wholesale Distribution reports.

Because of the nature of the business - distribution to industrial users - and regardless of the manner in which the sales are made, most supply houses, including barbers' supplies and dental supplies, have been included in the Wholesale census rather than in the Retail census. Likewise, most machinery dealers (except farm -implement dealers) and dealers in iron and steel products, leather and findings and junk are included in the Wholesale census.

Retail and Service

As in the case of establishments doing both retailing and wholesaling, the line of separation between retail and service establishments was drawn at 50 percent. Those businesses which reported receipts from services in excess of the receipts from the sale of merchandise were classified in their entirety in the Service Census; and those showing receipts from services in lesser dollar value than sales of merchandise were classified in their entirety in the Retail Census. An exception to this rule was made in 1933 for certain kinds of business in which the establishments were classified as Service establishments only if the receipts from services exceeded two-thirds of the total receipts. These kinds of business were mainly automobile accessories stores, tire and battery shops, radio stores, electrical shops, heating and plumbing shops, and some small jewelry establishments. It was felt that unless the determining percentage for receipts from merchandise sales was set at a low level during the depression there was danger of confusing what were essentially retail stores with service establishments. Because of the conditions obtaining in 1933, merchandise sales dwindled to such an extent that revenue from service, ordinarily a subordinate function of a retail business, assumed unusual importance.

In the 1935 census of retail-service borderline establishments have been handled on the 50 percent basis. These borderline establishments occur most frequently in the following fields: furs and fur repairing and storage ; tailoring and cleaning and pressing shops; radio sales and repair work; and electrical shops.

Retail and Construction

A considerable number of heating, plumbing and electrical contractors who were included in the 1933 Retail Census have been transferred to the 1935 Construction Census, leaving in the Retail Census only those dealers whose business is primarily the sale of equipment and supplies as such, rather than primarily installation and repair work.

Retail and Manufactures

In general, the principle was followed of classifying all establishments engaged both in manufacturing and in selling at retail, as manufacturing plants when the value of their products exceeded \$5,000; as such they are enumerated by the Census of Manufactures. The strict application of this principle in 1935 to the combined manufacturing and retailing bakeries accounts for the marked drop in bakery sales shown in the Retail Census for 1935.

The 1935 Schedules

Two schedule forms were used for 1935, on which information was collected for all retail stores. A short-form schedule (Form 20) was used in the enumeration of stores with less than \$50,000 of sales in 1935. The long-form schedule (Form 21) was used in canvassing all stores that had sales of \$50,000 or over. The forms were identical except for the inquiries on commodity sales. Form 20 contained a short check list of commodities and a separate inquiry relating primarily to the commodity sales of general stores (with food). Form 21 contained a detailed commodity inquiry, comparable in general to the commodity inquiry on the 1929 schedules. Due to the fact that the commodity data were not furnished uniformly by most of the stores, it has been impossible to compile and publish detailed information for all kinds of business. An attempt will be made to publish, at a later date, commodity information on a small sample basis for a number of kinds-of-business classifications.

The inquiries on employment were expanded, as compared to the previous censuses. Employment and pay roll data by occupational classes for a representative week were obtained for the first time. The subject is covered in Retail Volume V.

Basic Classifications

The findings of the 1935 Census are presented in two basic classifications: by geographic divisions, States, cities and counties; and by kinds of business, based on the usual designation of the establishment and the commodities sold. The first indicates the geographic distribution of retail business in its component parts - grocery stores, restaurants, hardware stores, drug stores, etc.- and permits the presentation of a quantitative description of the retail trade for each area.

The second classification - by kinds of business - is in a sense more fundamental than the first. The student of marketing, whether he be a business man or in an academic or other field, will ordinarily find information on retailing by kinds of business of greater value than aggregate figures on retail trade. A description of the kind-of-business classifications for 1935 and a tabular comparison of the 1935, 1933 and 1929 classifications will be found in Part IV of this volume.

Comparisons by kinds of business and by major groups for the three census years are subject to some qualification by reason of a number of unavoidable shifts between classifications. The principal causes of these shifts were: (1) more complete information in 1935 than in 1933, permitting more accurate classification of individual stores; and (2) greater emphasis upon commodity sales as a basis of classification.

The commodity information available in 1935 and the greater use of it as a basis of classification resulted in unavoidable shifts in classifications of some dual-line stores handling substantially equal proportions of such lines as furniture and hardware, groceries and feed, clothing and general merchandise, or coal and building materials. Because of the marked decrease between 1929 and 1933 in the sales of apparel, furniture, hardware, building materials and farmers' supplies and the pronounced increase from 1933 to 1935, dual-line stores were quite likely to have changed the relative proportions of the sales of their two main commodities since 1933 and consequently the classification of their stores, even resulting in some cases in shifts from one major group to another. The effect of such shifts upon kind-of-business comparisons varies in different States depending upon the prevalence of such dual-line stores, but in most States they account for such a small volume of sales as to have little effect. Attention is called in the text material in Part I to the effect upon certain kinds of business of shifts in classification. The definitions in Part IV of this volume provide a fairly detailed description of the character of the 1935 classifications.

SECTION 1 - STORES AND SALES

Retail sales in the United States in 1935 totalled \$33,161,276,000, as reported by 1,653,961 stores and presented herein. In 1933 retail stores numbered 1,526,119 with sales of \$25,037,225,000. Thus the number of stores was 8.4 percent higher in 1935 than in 1933, with sales showing a 32.4 percent increase.

The sales increase of 32.4 percent over 1933 was in contrast to a sharp decrease between 1929 and 1933, which for the United States amounted to 49 percent of the 1929 volume. Sales in 1935 were nearly one-third lower in dollar volume than in 1929, but a substantial part of the decrease was caused by the difference in price levels in the two years. The number of stores in 1935 was 7.2 percent higher than the total shown for 1929. A substantial part of the increase in stores, but an insignificant proportion of sales, was due to a better coverage in 1935 of market and roadside stands, house-to-house selling organizations, and certain other types difficult to identify, the enumeration of which is apt to vary considerable in different censuses.

Although sales increased 32.4 percent over 1933, the average sales per store increased only 22.2 percent due to the substantial increase in number of stores. On the other hand, the 49 percent decline in sales from 1929 to 1933 resulted in about the same proportionate drop in average sales per store because the number of stores was approximately the same in both years.

A comparative summary of the above facts follows:

	<u>1935</u>	Percent Change 1933 to <u>1935</u>	<u>1933</u>	Percent Change 1929 to <u>1933</u>	<u>1929</u>
Number of stores	1,653,961	+ 8.4	1,526,119	- 1.1	1,543,158
Sales	\$33,161,276,000	+32.4	\$25,037,225,000	-49.0	\$49,114,653,000
Avg. sales per store	\$20,050	+22.2	\$16,406	-48.5	\$31,827

Stores and Sales by States

The geographic distribution of retail stores and sales, as shown in Table 1B, indicates a considerable degree of concentration of retail trade. Two geographic divisions - the Middle Atlantic and East North-Central account for 45 percent of the number of stores and 47 percent of the amount of sales. Five States with the largest volume of sales - New York, Pennsylvania, Illinois, California, and Ohio - have about 38 percent of the

stores and over 41 percent of the sales. New York State alone accounts for about one-eighth of the total stores in the United States and one-seventh of total sales.

This concentration of retail trade is related but not proportionate to the distribution of population. According to the estimated population figures for 1935, as prepared by the Bureau of the Census, (see page 2-03) the two geographic divisions with 47 percent of sales had slightly more than 41 percent of the population; the five largest States with 41 percent of sales had 34 percent of the population. Highest per capita sales are found in Nevada with \$444, California with \$388, and New York with \$368; these figures contrast with \$89 for Mississippi, \$119 for Alabama, and \$120 for Arkansas. Per capita sales, however, must be used with caution because of such factors as purchases by mail, trade across State lines, and the varying complexity of the population.

The increase in sales from 1933 to 1935, which averaged 32 percent for the country as a whole, was unevenly distributed among the States. As shown in the table below, the Mountain division had the greatest increase (49 percent), followed by the Pacific division with 40 percent. Among the Mountain States, the increases varied from a low of 30 percent for Colorado to a high of 69 percent for Montana, which had the greatest increase of any State. The 1935 figures for Colorado were affected to a considerable degree by incomplete coverage, particularly in Denver. The New England States with a 26 percent increase showed the smallest relative gain of any geographic division.

<u>Percentage Increase in Sales, 1933-1935, by States</u>

Sales by Kinds of Business

Slightly over one fourth of the total volume of retail sales in 1935 was in food stores. The general merchandise group and the automotive group (exclusive of filling stations) accounted for almost exactly the same proportions of total sales, each accounting for approximately 14 percent. The sales in apparel stores made up about one-twelfth of total retail trade. These ratios do not indicate the distribution of the expenditures of the American people on food, clothing, automobiles or other commodity lines, as the sales by stores in a particular kind of business are not identical with sales of the principal commodity which they handle. For example, food stores sell more than food, and food also is sold in other kinds of stores including variety, general, and department stores.

An examination of the changes from 1929 to 1933, and from 1933 to 1935, in the volume of retail sales by business groups shows that of the six groups showing increases since 1933 in excess of the 32 percent shown for retail trade as a whole, all but one had unusually large decreases between 1929 and 1933. The exception is the eating and drinking place group which, although showing only a 33 percent decrease in the first period, had a 67 percent increase in 1935 over 1933, due to the unusually large increase in drinking places since 1933. The sales of eating places alone show an increase from 1933 to 1935 of 26 percent.

The automotive group (exclusive of filling stations) which had a 63 percent decrease from 1929 to 1933, shows an increase for 1935 over 1933 of 60 percent. Likewise the lumber-building-hardware group, apparel group, and the furniture-household group had large decreases in the first period with marked improvement in volume in the period from 1933 to 1935. The 1935 totals for the lumber-building-hardware group are affected to some extent by the transfer to the 1935 Construction Census of a number of heating, plumbing and electrical contractors who were included in the 1933 Retail Census.

Of the six business groups that show increases smaller than the increase for retail trade as a whole from 1933 to 1935, only the general-store group had a larger than average decrease between 1929 and 1933. The small increase shown for this group since 1933 is due to a considerable extent to a stricter classification of general stores, made possible largely by the greater amount of information available on the 1935 schedule (see definitions).

A summary of stores and sales by business groups for the three census years follows:

Comparison of Stores by Business Groups, 1935, 1933 and 1929

Business Group	Number of Stores			Percent of		
	1935	1933	1929	Total	Stores	
	1935	1933	1929	1935	1933	1929
United States total	1,653,961	1,526,119	1,543,158	100.00	100.00	100.00
Food Stores	532,010	470,149	481,861	32.17	30.81	31.23
Eating and drinking places	251,473	200,335	134,293	15.20	13.13	8.70
General stores (with food)	66,701	85,839	104,086	4.03	5.62	6.74
General merchandise	44,651	46,712	54,636	2.70	3.26	3.54
Apparel	65,668	86,548	114,266	5.80	5.67	7.41
Automotive	116,702	134,666	136,172	7.06	8.84	8.82

Lumber-building-hardware	73,186	76,098	90,386	4.43	4.99	5.86
Drug Stores	56,697	58,407	58,258	3.43	3.83	3.78
Other retail stores	151,240	129,783	173,618	9.14	8.50	11.25
Second-hand-stores	22,550	20,869	15,065	1.36	1.37	0.98

Comparison of Sales by Business Groups, 1935, 1933 and 1929

Business Group	Net Sales			Percent of				
	1935	% of	1933	% of	1929	Total	Sales	
	(add 000)	change	(add 000)	change	(add 000)	1935	1933	1929
United States total	\$33,161,276	32	\$25,037,225	-49	\$49,114,653	100.00	100.00	100.00
Food stores	8,362,425	23	6,776,280	-37	10,837,421	25.22	27.07	22.07
Eating and drinking places	2,390,860	67	1,429,938	-33	2,124,890	7.21	5.71	4.33
General stores (with food)	1,110,403	1	1,097,437	-57	2,570,744	3.35	4.38	5.23
General merchandise	4,619,751	19	3,891,272	-40	6,444,101	13.93	15.54	13.12
Apparel	2,656,242	38	1,923,333	-55	4,240,893	8.01	7.68	8.63
Automotive	4,606,650	60	2,887,525	-63	7,828,387	13.89	11.53	15.94
Filling stations	1,967,714	28	1,531,724	-14	1,787,423	5.93	6.12	3.64
Furniture-household	1,289,896	35	958,780	-65	2,754,721	3.89	3.83	5.61
Lumber-building-hardware	1,864,275	39	1,342,705	-65	3,845,624	5.62	5.36	7.83
Drug stores	1,232,593	16	1,066,252	-37	1,690,399	3.72	4.26	3.44
Other retail stores	2,947,127	45	2,026,704	-58	4,841,982	8.89	8.10	9.86
Second-hand stores	113,340	8	105,275	-29	148,068	.34	.42	.30

Note: - A comparison of 1,099,663 of the 1,653,961 stores in 1935, with sales of the identical stores in 1934, shows an increase in the one year of 10.6 percent. For comparisons in detail, by counties, see special 1935 Census report entitled "Retail Trade Survey".

SECTION 2 - EMPLOYMENT AND PAY ROLL

There were employed in retail stores throughout 1935 an average of 3,961,478 paid employees. In addition there were 1,511,734 active proprietors and firm members devoting the major portion of their time to the operation of their stores, resulting in total employment of 5,473,212 persons in retail stores.

Total pay roll in retail stores aggregated \$3,623,289,000, of which \$3,388,166,000 was paid to full-time employees and \$235,123,000 to part-time employees. The compensation of proprietors and firm members of unincorporated businesses is not included in these amounts.

A brief summary of employment and pay roll data for 1935, together with 1933 and 1929 comparisons, follows:

		% change		% change	
	1935	1933-1935	1933	1929-1933	1929
Number of employees	3,961,478	15.4	3,433,652	-22.0	4,402,940
Pay Roll - Total	\$3,623,289,000	24.5	\$2,910,445,000	-43.9	\$5,189,670,000
Full-time	3,388,166,000	27.2	2,664,447,000	-47.0	5,028,282,000
Part-time	235,123,000	-4.4	245,998,000	52.4	161,388,000
Proprietors	1,511,734	-4.0	1,574,341	4.2	1,510,607

Comparisons with 1933 and 1929

As shown above the number of employees (average for the year) increased 15.4 percent over 1933 as compared to a 24.5 percent increase in pay roll. The 1935 employment total is 90 percent of the 1929 figures, whereas the total pay roll for 1935 is approximately 70 percent of the 1929 total.

A comparison of the number of proprietors for the three years is subject to qualification because of differences in the inquiry and enumerators' instructions in the different censuses. In 1933 the enumerators were instructed to include as proprietors all owners of unincorporated establishments and adult members of their families who were actively employed in, and devoting the major portion of their time to the business. Inactive proprietors or partners were not included. On the 1935 schedules the corresponding inquiry called for the number of proprietors and firm members devoting the major portion of their time to the business. Members of proprietor's family were not included as proprietors. It is likely that these differences in the phrasing and enumeration of the proprietor inquiry accounted for part of the higher figure reported for 1933. Table 1A in this volume shows employment and pay roll by kinds of business; and the same information by States.

Stores Without Paid Employees

Although no data are available which show the exact number of retail stores that have no paid employees, it is estimated on the basis of a special tabulation that approximately 40 percent of all retail stores are operated entirely by proprietors and their families who receive no stated compensation. A tabulation of 1,449,378 stores, composed of

single-store independents, independent leased departments and concessions and certain miscellaneous one-store types, indicated that 654,325 stores, or 45.2 percent of the total, had no paid employees. As the difference between the stores in this tabulation and the total of all stores (1,653,961) is made up largely of chain stores, multi-unit independents and other types which ordinarily have paid employees, it is likely that the 654,325 stores represent substantially all of the stores without paid employees. They represent about 40 percent of all retail stores.

In order to complete the picture of total employment in retail establishments, definite data on the members of proprietors' families working full-time and those working part-time would be highly desirable. Although data on this subject were called for on the schedule forms, because of frequent misinterpretation of this item with resultant errors in reporting, the importance of family members in the operation of retail stores cannot be determined from the information obtained in connection with the Census. Those members of proprietors' families who are paid a stated salary for working regularly, either full-time or part-time, are included as paid employees. Unpaid members as reported totalled 704,624, of which 648,886 were over 18 years of age and 55,738 were reported as under 18 years--full-time and part-time combined.

Employment by Months

The number of paid employees in retail stores in the United States in 1935 increased from a low of 3,721,422 in January to a peak of 4,379,211 in December, a variation of 16.6 percent. With the exception of July, each month showed an increase in employment over the preceding one. However, as is shown in the table below, the month-to-month increases varied considerably. February employment showed a very small increase over that for January, and May had only a slightly greater increase over April. The employment for the months of August and November in each case was only .4 percent above that of the preceding month. As contrasted to these changes April employment was 3.1 percent above March and that for the month of December showed a 5.6 percent gain over November.

The months of September to December, inclusive, show employment in excess of the average for the year. The 4,379,211 employment figure for the peak month of December was 10.5 percent higher than the average figure of 3,961,478. The total reported for the low month of January was 6.1 percent under the average.

Comparison with 1933

Each month in 1935 showed more employees than the corresponding month in 1933, but the difference varied considerably by months. The month of March with the greatest difference showed an increase of 20.8 percent over 1933, while December with the smallest increase showed 10.9 percent gain over December of 1933. In 1935, January was the low month of employment while in 1933 the low point occurred in February. However, in each of the two years the difference between the months of January and February was small.

A comparative summary of the number of paid employees by months for 1935 and 1933 is given below:

Month	Number of employees (full-time and part-time)		Per- cent increase 1935 over 1933	Ratio of monthly em- ployment to average for year		Percent change from preceding month	
	1935	1933		1935	1933	1935	1933
Average for year 1/	3,961,478	3,433,652	15.4	100.0	100.0	----	----
January	3,721,422	3,118,076	19.3	93.9	90.8	----	----
February	3,722,161	3,113,391	19.6	94.0	90.7	----	.2
March	3,773,721	3,125,031	20.8	95.3	91.0	1.4	.4
April	3,891,165	3,286,347	18.4	98.2	95.7	3.1	5.2
May	3,896,984	3,298,135	18.2	98.4	96.1	.1	.4
June	3,943,583	3,372,225	16.9	99.5	98.2	1.2	2.2
July	3,933,143	3,391,053	16.0	99.3	98.8	.3	.6
August	3,947,742	3,473,172	13.7	99.7	101.2	.4	2.4
September	4,048,872	3,637,628	11.3	102.2	105.9	2.6	4.7
October	4,131,337	3,703,621	11.5	104.3	107.9	2.0	1.8
November	4,148,266	3,734,842	11.1	104.7	108.8	.4	.8
December	4,379,211	3,950,299	10.9	110.5	115.0	5.6	5.8

1/ Represents the average number of employees as shown in Table 2A.

Variations in Monthly Employment by Kinds of Business

In Table 2A the number of employees by months is given for each of 66 kinds of business. A study of the table shows that with few exceptions the low month of employment was January or February, with January the more common. December was the most frequent high month, followed by October.

Both the kind-of-business groups and the individual classifications under the various groups show marked differences with regard to the high and low months of employment and the changes in employment from month to month. In many instances these differences indicate the relative importance of seasonal variation in the various lines of trade.

Variations in Monthly Employment by States

An examination of monthly employment figures by States shows that with few exceptions the low month of employment was January or February and the peak of employment came in the month of December. January was the low month for 23 States and February for 22. The State of New Mexico had exactly the same employment for January and February. For New Hampshire and Vermont March was the low month of employment, while for Florida the low was July. All but four States had their peak employment in December. August was the high month for Maine, New Hampshire, and Wyoming and October for North Dakota. For details see Table on page 2-08.

Full-time and Part-time Employment and Pay Roll

The analysis of full-time and part-time employment in retail trade is based on employment and pay roll reported for the week ending October 26, 1935 or in a few cases of highly seasonal businesses for a week of normal employment during the business season. Each store was requested to report for full-time and part-time separately the number of employees and pay roll and to classify the employees for the week into occupational classes. The information on employment and pay roll for the representative week does not include all stores having employment. Some stores failed to answer the inquiry and in other cases the information had to be deleted from tabulation because of the unsatisfactory character of the information.

Of the 3,284,723 employees reported for the week, 2,641,041 (80.4%) were reported as full-time and the balance (19.6 percent) as part-time employees. The pay roll for full-time employees represented 92.1 percent of the total pay roll as compared to 7.9 percent for part-time employees.

The proportion of full-time and part-time employment varies considerably by kinds of business. The table below presents a summary of full-time and part-time comparisons by 11 business groups. Food stores, as a group, showed the highest percentage of part-time employees with 24.5 percent of the total number reported on a part-time basis. The general merchandise group (dry goods and general merchandise, department stores, and variety stores) showed almost as high a ratio of part-time employment to total employment, with 24.2 percent. In contrast to these groups the automotive group (not including filling stations) showed the smallest percentage of part-time employment with only 7.4 percent of the employees being so reported. Similar information for individual kinds of business can be obtained from Table 2C, on page 2-10.

FULL-TIME AND PART-TIME EMPLOYMENT AND PAY ROLL FOR ONE WEEK

Kind-of-business group	Total employees reported for week	Total pay roll reported for week	Full-time		Full-time		Part-time		Part-time	
			employees	% of total	pay roll	% of total	employees	% of total	pay roll	% of total
			Number	em- plo- ees	Amount	weekly pay roll	Number	em- plo- ees	Amount	weekly pay roll

Average Wage of Full-time Employees

The 2,641,041 full-time employees reported for the week were paid a total weekly pay roll of \$51,660,716, or an average weekly wage of \$19.56. The average compensation varied considerably by kinds of business. Jewelry stores reported the highest figure, \$28.76, followed closely by dairy products stores and milk dealers with \$28.05. Lunch counters and refreshment stands paid the lowest average weekly wage, \$11.93. The restaurant, cafeteria and lunch room classification showed an average figure of \$13.06, news dealers \$13.20 and variety stores \$13.53. Gratuities which constitute an additional income of many workers in the restaurant group, are not included as pay roll.

Of the kind-of-business groups, the furniture-household group had the highest weekly wage, with an average of \$24.89. The automotive group (excluding filling stations) was second with a weekly wage of \$23.77, followed closely by the lumber-building-hardware group with \$23.68. The lowest average weekly wage was \$13.46 shown for eating and drinking places. Food stores with \$19.66 and the general merchandise group (dry goods, general merchandise, department and variety stores) with \$19.57 had almost exactly the same weekly wage.

The average weekly wage for full-time employees varied considerably by States and geographic divisions. As a group, the Pacific Coast States had the highest average with \$22.20, followed by the Middle Atlantic with \$21.42 and New England with \$21.04. The lowest average weekly wages were in the Southern States, with \$15.68 in the East South-Central group, the lowest shown for any geographic division.

In evaluating the average weekly rates of pay, some consideration should be given to the differences in conditions in the various States that affect the average rates of compensation. For example, it is evident that those States or sections of the country that contain large cities tend to show considerably higher weekly wage rates, but that is not always the case, as shown by Nevada and Montana.

Among the States, Nevada had the highest wage rate with \$24.13, followed by \$22.72 for Montana, \$22.49 for California and \$22.46 for New York State. The lowest weekly wage rate was \$14.23 for Mississippi. Louisiana was slightly higher with \$14.73.

Employment by Occupational Groups

Of the 3,284,723 employees reported for the representative week, 111,991 or 3.4 percent were executive and salaried corporation officers; 239,843 or 7.3 percent were office and clerical employees; 1,574,265 or 47.9 percent were selling employees; 375,232 or 11.4 percent were waiters and waitresses; and 983,392 or 30 percent were classified as "other employees."

The proportion of each occupational group to the total for all groups varied somewhat as between full-time and part-time employees. Of the 2,641,041 full-time employees reported, 4.1 percent were classified as executives, whereas part-time executives accounted for only .7 percent of the total number of part-time employees. Full-time office and clerical workers accounted for 8.2 percent of all full-time employees as compared with only 3.4 percent of part-time employees. As contrasted to these, selling employees constituted 53.5 percent of the total number of part-time employees and only 46.6 percent of the total of full-time employees. The percentage of waiters and waitresses to the total of all employees varied only slightly as between full-time and part-time employees. Active proprietors are not included in this comparison.

Of the total pay roll for full-time employees 10.2 percent was paid to executives and salaried corporation officers, 8.8 percent to office and clerical, 46.8 percent or almost one-half to selling employees, 6.7 percent to waiters and waitresses and 27.5 percent to "other employees". Executives and salaried corporation officers were the highest paid employees at \$49.16 per week, followed in order by office and clerical employees at \$20.76, selling employees at \$19.65, other employees at \$18.10 and waiters and waitresses at \$11.59. A summary of the information on occupational groups is presented in the following table:

EMPLOYMENT AND PAY ROLL BY OCCUPATIONAL GROUPS

Occupational Group	Total employees reported for week		Full-time employees		Pay roll for one week		Average wage		Part-time employees	
	Percent		Percent		Percent		per-		Percent	
	Number	of	Number	of	Amount	of	full-	time	Number	of

Employment by Sex

Each store was asked to report the number of paid employees for the representative week by sex. A summary of this information by kinds of business and by States is shown in Table 2D. Of the 3,284,723 employees reported for the week, 30.5 percent are women. As all stores with employees did not answer the occupational inquiry, the total number of women employed in retail trade cannot be stated exactly. However, it is likely that the percent of women as shown by the stores reporting weekly information is fairly representative of retail trade as a whole, which would indicate a total for women of 1,208,250 in addition to women proprietors, the proportion of whom is unknown. However, the ratio reported in 1929 was 9 percent.

The ratio of women to the total varies greatly with the kind of business from a low of 3.5 percent in garages to a high of 92.9 percent in millinery stores. The number of women accounts for more than one-third of the total for each of the following kinds of business; candy and confectionery stores, other food stores, dry goods and general merchandise stores, department stores, variety stores, family clothing stores, women's ready-to-wear stores, millinery stores, other apparel stores, restaurants and lunch rooms, lunch counters and refreshment stands, book stores, and gift, novelty and souvenir shops.

The ratio of women to the total number of employees shows some variation by States (see Table 2D, Page 2-12). Pennsylvania had the highest proportion of women employees, 35.8 percent, followed closely by Minnesota with 35 percent. The lowest proportion of women employees was in Alabama where they constituted 24.8 percent.

Detailed Employment and Pay Roll Data

Because of the importance of employment in retail trade, a separate volume (Vol. V) of the Retail series is devoted to this subject. In it are presented in greater detail employment and pay roll data by kinds of business and by States.

SECTION 3 - OPERATING EXPENSES

The average operating expense ratio for 1935 reported by retailers as a whole was 22.9 percent of sales, to which must be added certain unreported expenses. Items which are charged to the cost of doing business include pay roll, rent, advertising, supplies, heat, light, power, communication, travel, taxes, insurance, interest on borrowed money, and some repairs and depreciation. Compensation for proprietors of unincorporated businesses is not included. Of the total operating expense figure, pay roll accounts for 48 percent.

If proprietors' services are computed at clerk value or the average amount paid to a full-time employee, the average expense ratio is increased from 22.9 percent to a total of 23.9 percent of sales. The latter figure in 1933 was 29.4 percent.

A special sample tabulation on rental costs, which included 43.8 percent of total retail stores and 53.2 percent of total sales, revealed that rental costs average 3.91 percent of sales in leased premises and constitute more than 16 percent of the total reported operating expenses of stores operating in leased premises. Although this ratio cannot be applied to all retail stores, since a number of stores are operated in wholly or partially owned premises, nevertheless it gives some measure of the cost of this expense item. Even in wholly owned premises, taxes, insurance, depreciation, bond interest and other expenses are present in lieu of rent.

Although the ratios for rent and pay roll are not directly comparable, they offer some measure of the ratio which each bears to total reported operating costs.

An analysis of operating expenses from the standpoint of pay roll and other expenses, by kinds of business, reveals the importance that pay roll bears to total operating expense. The following table shows the ratio of pay roll to sales and the ratio of other operating expenses to sales for selected kinds of business.

Kind of Business	Total reported operating exp. percent to sales <u>1/</u>	Total pay roll percent to sales	Other expenses percent to sales
Grocery stores (without meats)	12.8	5.7	7.1
Combination stores (groceries and meats)	14.9	7.3	7.6
Department stores	29.2	14.2	15.0
Variety stores	26.6	11.7	14.9
Women's specialty shops	28.8	13.0	15.8
Motor-vehicle dealers (new)	15.4	8.4	7.0
Filling stations	18.1	9.0	9.1
Furniture stores	31.9	14.7	17.2
Household appliance and radio stores	34.9	19.7	15.2
Lumber-building material dealers	23.3	12.6	10.7
Drug stores (with and without fountain)	23.7	11.6	12.1
Jewelry stores	34.8	15.1	19.7

1/ To which must be added a proper allowance for the services of active proprietors, whose compensation is not included in pay roll nor in total reported expense.

Comparisons with 1929 and 1933

The operating expense ratios, by kinds of business for 1935, 1933 and 1929 are based upon total reported operating expenses and do not include any wage value for proprietors' services. These comparisons offer a fair measure of the changes which have taken place by kinds of business, during the period mentioned above.

In a special report on Retail Operating Expenses, provision is made for an imputed compensation for proprietors' services.

For retail trade as a whole, operating expenses which in 1935 averaged 22.9 percent of sales compare with 26.0 percent in 1933 and 21.1 percent in 1929. The table on the following page shows 1935 ratios compared with 1933 and 1929 ratios by kinds of business, as well as more detailed information regarding the ratio of total pay roll to sales for the country as a whole and by kinds of business.

While pay roll in dollars was reduced 42 percent from 1929 to 1933, through a decline in both the number of employees and the rates of pay, other reported expenses decreased only 31 percent. In 1935 pay roll increased 24 percent over 1933, while the number of employees (full-time and part-time combined) increased 15.4 percent. The average annual wage for full-time employees was \$1,017 in 1935, based upon a projection of the average weekly wage for full-time employees as reported in Retail Volume V, on Employment and Pay Roll.

A comparison of total reported pay roll and other operating expenses for 1935, 1933 and 1929, per \$100 of sales, before making any provision for proprietors' compensation, is shown below:

	1935	1933	1929
Pay roll, except proprietors	\$10.93	\$11.62	\$10.57
Other reported expenses	<u>11.97</u>	<u>14.34</u>	<u>10.55</u>
Total reported expense	\$22.90	\$25.96	\$21.12

1/ Does not include compensation for services of proprietor-owners actively engaged in the operation of their stores.

(a) No comparable data for 1933.

(b) No comparable data for 1929.

N.C. Not comparable.

Section 4 - Retail Credit

Because of the importance of retail credit granting, both from the standpoint of amount and type of credit, this subject is treated at length in Volume VI.

The analysis presented in Volume VI indicates that in 1935 retailers did 67.8 percent of their business on a cash or C.O.D. basis, 21.3 percent on open account and 10.9 percent on the instalment basis. Thus approximately one-third (32.2 percent) of total retail sales were credit sales. About two-thirds of the credit business was done on an open-account basis and the other third was instalment business.

Comparisons With 1933 and 1929

Comparisons with 1933 and 1929 must be qualified by reason of certain differences in the credit inquiry and in the method of presenting the material in previous Censuses. In 1929 a considerable number of stores - 240,604 with sales aggregating \$5,894,681,000 - failed to report clearly whether, and how much, they sold on credit and were not included in the 1929 credit tabulations. The credit analysis for 1929 was carried through on the 1,302,554 stores after the 240,604 stores, not sufficiently identified, were eliminated. In 1933, with a simpler schedule, coverage on the credit inquiry was more complete and the few stores which failed to report clearly on credit sales were grouped with cash stores for practical purposes. No instalment inquiry was included in 1933. Of the 1,653,961 retail stores in 1935, 1,486,029 or 90 percent are included in the cash-credit analysis of sales. Their sales of \$27,888,261,000, cash and credit (exclusive of receipts from other sources) represent 84.5 percent of the corresponding sales total for all stores.

In 1929 data were available which made it possible to estimate the approximate amount of instalment credit. The credit amount reported in 1933 covered only credit extended by retailers; that is, sales for which they received no immediate payment in cash. The degree to which the 1933 amount may have included consumer credit extended through instalment-finance companies could not be determined from the data available. In 1935 the respondent was requested to report instalment sales handled by a finance company or other third party as instalment sales and not as cash transactions, even though cash proceeds of the sale were received by the seller immediately upon consummation of the sale.

A summary comparison for the three years, subject to the above qualifications, is presented below:

Credit Sales Ratio, by Years

	<u>Percent of total sales</u>		
	<u>1935</u>	<u>1933</u>	<u>1929</u>
Total sales	100.0	100.0	100.0
Cash and C.O.D. sales	67.8	72.3	65.7
Credit sales	<u>32.2</u>	<u>27.7</u>	<u>34.3</u>
Open-account credit	21.3	X	21.3
Instalment credit	<u>10.9</u>	<u>X</u>	<u>13.0*</u>

X - No breakdown of credit sales available for 1933.

* - Approximate proportion, based on limited sample.

Credit By Kinds of Business

The largest percent of credit business was reported by household appliance and radio stores with 74.5 percent of the sales on a credit basis. Sales on an instalment basis accounted for 54.9 percent of the total sales of that kind of business, with open-account credit representing 19.6 percent. Furniture stores show almost as high a credit ratio with 48.7 percent instalment and 23.6 percent open-account, a total of 72.3 percent. Lumber and building-material dealers show 70.7 percent credit sales. Motor vehicle dealers (new) show 69.9 percent, made up of instalment credit (59.9%) and open-account credit (10.0%).

By groups, the largest percentage of credit is reported by stores in the furniture-household, lumber-building-hardware, and automotive groups. Under the "Other retail stores" group certain individual kinds of business show relatively high credit proportions, such as book stores, fuel and ice dealers and jewelry stores.

The food group as a whole show that slightly over one-fifth of the total business is done on a credit basis. Within the group, however, the percentage of credit varies from a high of 58.8 percent for dairy products stores and milk dealers to a low of 2.2 percent for candy and confectionery stores. Grocery stores (without meats) show 15.9 percent, combination stores (groceries and meats) 23.2 percent, and meat markets 14.1 percent.

In the table below are presented relative proportions of open-account, instalment, and cash sales for selected kinds of business:

CREDIT AND CASH RATIOS FOR SELECTED KINDS OF BUSINESS

Kind of business	Percent open-account sales	Percent instalment sales	Percent cash and C.O.D. sales
All stores	21.3	10.9	67.8
Candy and confectionery stores	2.2	----	97.8
Dairy products stores			
and milk dealers	58.8	----	41.2
Grocery stores (without meats)	15.9	----	84.1
Combination stores			
(groceries and meats)	23.2	----	76.8
Meat markets	15.5	----	84.5
Department stores	26.8	9.7	63.5
Variety stores	.1	----	99.9
Men's clothing and			
furnishings stores	23.7	1.5	74.8
Family clothing stores	23.4	17.0	59.6
Women's ready-to-wear stores	24.6	1.6	73.8
Shoe stores	7.2	----	92.8
Motor-vehicle dealers (new)	10.0	59.9	30.1
Filling stations	21.8	.4	77.8
Furniture stores	23.6	48.7	27.7
Household appliance			
and radio stores	19.6	54.9	25.5
Lumber-building-material dlrs.	68.4	2.3	29.3
Hardware stores	34.7	3.4	61.9
Hardware & farm implement dlrs.	34.8	16.1	49.1
Drug stores	7.8	.1*	92.1
Fuel and ice dealers	52.0	1.3	46.7
Jewelry stores	22.3	24.3	53.4

* - Represents primarily instalment sales of radio sets and household appliances.

Detailed Credit Tables

Table 5A presents a summary for the United States of open account, instalment, and cash and C.O.D. sales for 66 kinds of business. Similar tables (Table 5) for each State and each city of more than 500,000 are shown in Volume VI.

SECTION 5 - TYPES OF OPERATION

Of the 1,653,961 retail stores in 1935, 1,474,149 or over 89 per cent were operated as independents, and 127,482 or almost 8 percent as chain units. The sales of independents amounted to \$24,246,112,000, constituting 73 percent of total retail sales, while chain store sales aggregated \$7,550,186,000 or almost 23 percent of the total. Stores under other types of operation accounted thus for only 3.2 of the places of business and 4.3 percent of the volume of sales.

Sales of mail-order houses (exclusive of their retail stores) constituted about 30 percent of the \$1,364,978,000 total for "other types." State liquor stores made up an additional 12 percent, their \$160,665,000 of sales in 1935 representing a considerable part of the increase over 1933 for "other types of operation." In addition, other types of operation include stores operated by public utility companies, mainly for the sale of electric and gas household appliances; commissary stores owned by manufacturing, mining or other companies primarily for the sale of goods to their employees; direct selling (house-to-house) retailers operating from central points with crews of solicitors; leased departments, found most frequently in department stores and operated independently of the store; consumer cooperatives; and a miscellany of other types, including itinerant vendors, rolling stores, roadside markets or stands and the like. Because of the difficulty of canvassing some of these "other types" the census enumeration of them is likely to have been incomplete, but their sales would have little effect on the results.

A summary showing the number of retail units and sales by types of operation, and comparable 1933 and 1929 figures, follows:

Comparison of Stores and Sales by Types, by Years

Types of Operation	Stores			Sales (add 000)		
	1935	1933 (a)	1929	1935	1933 (a)	1929
Total, all types	1,653,961	1,526,119	1,543,158	\$33,161,276	\$25,037,225	\$49,114,654
Independents	1,474,149	1,349,356	1,375,509	24,246,112	17,846,332	38,081,504
Chains	127,482	141,676	148,037	7,550,186	6,372,554	9,834,846

Direct Selling	.4	.5	.1	.4	.4	.2
State liquor	.1	--	--	.5	--	--
Other types	2.0	1.5	.6	1.1	1.6	.7

Comparisons with 1933 and 1929.

Independents increased their stores more than 9 percent and their sales 36 percent between 1933 and 1935. Although the number of chain stores was 10 percent less in 1935 than in 1933, the sales volume of chains was almost 19 percent greater. The chain sales ratio, which was 20.0 percent of total retail sales in 1929, and rose to 25.4 percent of total sales in 1933, returned to a position about halfway between the two extremes, or 22.8 percent of total sales in 1935.

Independents in 1935 did 63.7 percent of their 1929 dollar volume, chains did 76.8 percent. Mail-order houses (exclusive of their retail stores) did 81.5 percent of their 1929 total. Their 1935 sales of \$420,027,000 were 72 percent above 1933 as compared to a 32 percent increase for all types combined. Utility-operated stores (primarily selling household appliances) had sales of \$123,242,000 in 1935, which represented 75.8 percent of their 1929 volume.

By States

In all but four States the chain sales ratio dropped between 1933 and 1935. The exceptions are Colorado, District of Columbia, Maine and Vermont, in each of which States chains now do a greater proportion of the business than they did in 1933 or in 1929. In Colorado the relative proportion of the business done by chains as compared to independents is considerably affected by incomplete coverage in certain parts of the State, particularly Denver, because this incomplete coverage affects the sales figures for independents to a greater extent than it does the chain figures.

In all but two States the chain sales ratio was greater in 1935 than it was in 1929. The exceptions are Idaho and Montana. In Idaho the 1935 ratio was 19.9% vs. 20.7% in 1929. In Montana the 1935 ratio was 14.8% vs. 15.1% in 1929.

The chain sales ratio is higher than the national average of 22.8% in twelve States, as follows:

California	25.7%	Michigan	25.3%
Connecticut	24.5%	New Jersey	25.1%
Dist. of Columbia	29.7%	New York	25.0%
Illinois	29.3%	Ohio	24.0%
Indiana	24.3%	Pennsylvania	24.9%
Massachusetts	28.9%	Rhode Island	26.2%

In all of these States the chain sales ratio was also higher than the national average in 1933 and in all except Indiana it was higher than the national average of 1929.

The twelve States with the lowest chain sales ratio in 1935 are:

Mississippi	11.1%	North Dakota	15.9%
Arkansas	12.3%	New Mexico	15.9%
Wyoming	14.7%	South Carolina	16.2%
Montana	14.8%	Nebraska	16.5%
Minnesota	15.1%	Alabama	16.7%
Nevada	15.2%	Wisconsin	17.6%

By Kinds of Business

In the summary below is shown the relative distribution of sales among independents, chains and other types in 1935 for 26 kinds of business, together with 1933 and 1929 comparisons:

	<u>INDEPENDENTS</u>			<u>CHAINS</u>			<u>OTHER TYPES</u>		
	1935	1933	1929	1935	1933	1929	1935	1933	1929
All stores	73.1	71.3	77.5	22.8	25.4	20.0	4.1	3.3	2.5
Grocery stores (without meats)	60.8	54.3	53.6	38.2	45.0	45.7	1.0	.7	.7

Radio dealers	75.6	82.7	79.0	23.1	15.6	19.1	1.3	1.7	1.9
Lumber & bldg. material dealers	75.6	x	x	23.8	x	x	.6	x	x
Hardware stores & implement dlrs.	95.4	95.6	x	4.3	4.1	x	.3	.3	x
Restaurants and eating places	84.0	84.8	86.1	14.5	14.9	13.6	1.5	.3	.3
Drinking places	99.2	x	x	.1	x	x	.7	x	x
Cigar stores and cigar stands	61.1	65.1	73.5	35.8	33.9	25.1	3.1	1.0	1.4
Fuel and ice dealers	82.7	x	x	16.5	x	x	.8	x	x
Drug stores with fountain	71.1			28.8			.1		
Drug stores without fountain	84.1	74.0	81.2	15.4	25.1	18.5	.5	.9	.3
Hay, grain and feed stores	71.6	x	x	16.0	x	x	12.4(e)	x	x
Farm and garden supply stores	75.0	x	x	4.7	x	x	20.3(e)	x	x
Jewelry stores	90.3	93.6	93.0	8.9	5.9	6.4	.8	.5	.6
All other stores	78.8	79.6	x	14.3	15.0	x	6.9	5.4	x

(a) Principally State liquor stores. (b) Principally mail-order. (c) Principally leased departments. (d) Principally utility-operated stores. (e) Principally consumer cooperatives.
(x) No true comparisons available.

In 1935 chains accounted for one-third or more of total sales in only six kinds of business. They did the largest proportion of total sales in variety stores, accounting for 90.8 percent. In automobile accessories-tire-battery dealers and in shoe store chains did one-half of the total business. Of the total sales for cigar stores and cigar stands, chain store sales were 35.8 percent; 39.1 in combination stores (groceries and meats), and 38.2 in grocery stores (without meats).

In contrast to this, independents accounted for more than two-thirds of total sales in 17 out of the 26 kinds of business shown above.

In five kinds of business "other types" accounted for more than 10 percent of total sales. In beer and liquor stores (packaged), the 50.2 percent done by "other types" was principally State liquor store sales. The 39.3 percent shown for household appliance-radio stores was done principally by utility-operated stores, while mail-order sales made up most of the sales of "other types" shown by hay, grain and feed stores. "Other types" shown for farm and garden supply stores are largely sales of consumer cooperatives.

A comparison of the 1935 ratios with those for 1933 and 1929 indicate some material changes for certain kinds of business. Although the chain ratios for both grocery and combination stores are lower than in 1933, the chain ratio of 39.1 for combination stores in 1935 is almost 7 percent higher than 1929, in contrast to a 7.5 percent drop in the chain proportion in grocery stores over the same period.

The marked drop in the chain ratio for filling stations from 1933 to 1935 is primarily the result of the conversion by many large oil companies of all or a large part of their company-owned stations to a leased station basis, operated by independent lessees.

Detailed Type Data

Table 3-A analyzes retail trade for the United States as a whole by types of operation. Similar tables for each State and each city of more than 500,000 population are contained in Volume IV, as well as tables for 26 selected kinds of business showing type-of-operation information by States.

Reference is made also to a special report of the Retail Census entitled "Retail Chains and Ownership Groups," further analyzing chains and showing data on central offices and warehouses as well as store units. This special report likewise contains analyses of the operations of ownership groups of department stores since 1929, and of mail-order houses for the same period.

SECTION 6 - RETAIL CHAINS

Chains operating retail stores in the United States increased nearly 10 percent in number between 1933 and 1935, while the number of stores decreased 8.2 percent. Sales increased 25.0 percent. The three Census periods compare as follows:

		Percent		Percent	
	<u>1935</u>	<u>Change</u>	<u>1933</u>	<u>Change</u>	<u>1929</u>
Number of chains	6,079	+ 9.6	5,546	-21.5	7,061
Number of store units	139,810	- 8.2	152,308	- 4.6	159,638
Store sales (add 000)	<u>\$8,460,611</u>	<u>+25.0</u>	<u>\$6,767,766</u>	<u>-37.0</u>	<u>\$10,740,385</u>

Sales through central offices, in the nature of wholesale sales and transfers between chains, added \$281,779,000 to 1935 sales, compared to \$215,583,000 in 1933. These sales constitute the wholesale business of 228 chains operating 492 warehouses, in addition to their primary function of supplying the chains' retail stores with merchandise. The census shows central-office operations of 1,914 chains which reported central administrative and buying offices apart from their retail stores. All of these operations are shown in the comparative summary on page 1-30.

Retail chains are organizations operating more than three centrally merchandised retail stores in the same general kind of business (such as grocery, hardware, women's apparel, drug, etc.). Typically, they sell about the same lines of merchandise in all of their stores, and in about the same price range, thereby permitting quantity purchases and a degree of standardization in merchandising and operating methods. Usually central stocks are maintained; frequently there are central buying and administrative offices apart from any of the retail units; and 228 chains operate separate warehouses. However, it is not essential for a chain to have either a separate buying office or a warehouse; it may use stock room in one or more of its stores, or may require delivery directly to its stores from wholesalers or manufacturers.

Chain organizations within the scope of the above definition may include multi-unit retailers (with more than three stores each) in such types of operation as mail-order, leased-department chains, utility-operated chains, direct-selling, or state liquor chains, as well as the usual types of store chains. Of the 139,810 chain units enumerated herein, 127,482 are units of store chains and 12,328 are of other types described in detail in Retail Volume IV, summarized herein in Table 3A on page 2-13.

Chain-Store Warehouses

There is no relation between total chain sales and the comparatively small proportion of the goods which move through chain-store warehouses. Only 492 warehouses were operated in 1935, by 228 chains out of a total of 6,079 chains. The value of merchandise billed through these warehouses totalled \$1,864,221,000 at prices equivalent to what would have been the wholesale price had the goods been purchased from wholesalers. About 15 percent (\$281,779,000) of this amount is accounted for by sales through central offices, in the nature of wholesale sales. The primary function of the warehouses, however, is to supply the stores of their chains with merchandise which can be warehoused and distributed more economically than it can be delivered directly from producers. With the trend

toward fewer and larger retail units, this economic function of a warehouse becomes less important, and some chains are actively developing more wholesale business with independent stores.

Chain store warehouse operations in the three Census years compare as follows:

	<u>1935</u>	<u>1933</u>	<u>1929</u>
Number of warehouses	492	462	559
Wholesale value of goods billed through warehouses (add 000)	\$1,864,221	\$1,431,563	\$1,929,681
Stocks end of year, at cost (add 000)	\$93,471	\$66,204	\$98,840
Number of employees, F.T. and P.T.	26,322	18,450(a)	26,442
Total pay roll (add 000)	<u>\$33,948</u>	<u>\$28,383</u>	<u>\$40,635</u>
Full-time	\$33,253	\$27,865	(x)
Part-time	\$ 695	\$ 518	(x)
Total warehouse operating expense including pay roll (add 000)	\$76,603	\$64,767	\$83,829
Ratio of operating expense to wholesale value of goods handled	4.1%	4.5%	4.3%

Chain-store warehouses are located in 43 of the 48 states, and in the District of Columbia. Data on employment, pay roll, expense and the value of goods handled are shown by States, so far as the information can be reported without revealing the figures of individual chains, in a special report of the Retail Census entitled "Retail Chains," (Also shown in Wholesale Vol. I, page 135).

Central-Office Operations

A total of 1,914 central offices were operated in 1935 with 73,655 full-time and part-time employees and an aggregate pay roll of \$153,993,000. Total central-office expense, including pay roll, was \$288,421,000 of which \$94,445,000 was prorated to the stores and appears in the reported store-operating expense. The non-prorated central-office expense is equivalent to 2.29 percent of total chain store sales, or 2.22 percent of total chain sales if additional central-office sales at wholesale are included.

Central-office operations in 1935 compare with those in 1933 (no data for 1929 are available) as follows:

	<u>1935</u>	<u>1933</u>
Employees, full-time and part-time	73,655	(b)
Pay roll, total (add 000)	\$153,993	\$155,249
Total central-office optg. exp., incl. pay roll (add 000)	<u>\$288,421</u>	<u>\$310,110</u>
Proportion of above expense prorated to stores (add 000)	\$ 94,445	\$ 93,057
Remainder not charged to stores	<u>\$193,976</u>	<u>\$217,053</u>
Per \$100 of store sales	\$ 2.29	\$ 3.21

Employment and Pay Roll

Chains accounted for total employment in 1935, in stores and central offices and warehouses, of 1,171,671 persons, compared with 1,104,406 in 1933. Total Pay roll in all operations was \$1,211,066,000 in 1935, and \$1,051,990,000 in 1933. Pay roll was equivalent to \$13.85 per \$100 of sales in 1935, and \$15.06 per \$100 of sales in 1933.

- (a) Full-time employees only. Number of part-timers in 1933 not available.
 (b) Combined with warehouse in 1933. Not available separately.
 (x) No comparable data available.

It is not possible to compute the average annual earnings of full-time employees, because full-time and part-time employees are not reported separately for the year. Detailed employment data were requested for one representative week, however, for full-time store employees by occupational classifications and for part-timers. A 17 percent sample is available, covering 180,886 of the 1,071,694 store employees.

Of the total, 137,563 or 76 percent were full-time employees and 43,323 or 24 percent were part-timers. For the representative week, with a pay roll total of \$3,545,790, the amount paid to full-time employees was \$3,288,477 or 92.7 percent, and to part-timers \$257,313 or 7.3 percent. The average earned by full-time employees for the week was \$23.91; the part-time average was \$5.94 indicating that part-timers averaged about one-fourth of full-time working hours for the week. The week of October 26, 1935 was used as representative.

<u>Classification</u>	<u>Number</u>	<u>Pay Roll One Week</u>	<u>Average Pay for Week</u>
Total sample analyzed	<u>277,061</u>	<u>\$7,172,366</u>	<u>\$ 25.89</u>
Store managers and executives	2,531	283,818	112.14
Store office and clerical, full-time	8,556	208,798	24.40
Store selling employees, full-time	84,983	2,010,042	23.65
Store waiters, waitresses, full-time	16,090	232,024	14.42
Other store employees, full-time	<u>25,403</u>	<u>553,795</u>	<u>21.80</u>
Total store full-time	<u>137,563</u>	<u>\$3,288,477</u>	<u>\$23.91</u>
Store selling employees, part-time	34,122	186,239	5.46
Store waiters, waitresses, part-time	5,067	27,076	5.34
Other store employees, part-time	<u>4,134</u>	<u>43,998</u>	<u>10.64</u>
Total store, part-time	<u>43,323</u>	<u>\$ 257,313</u>	<u>\$ 5.94</u>
Central-office, full-time & part-time	71,908	\$2,982,477	\$ 41.48(c)
Warehouse, full-time and part-time	<u>24,267</u>	<u>644,099</u>	<u>26.54(d)</u>

Operating Expense

Total operating expenses of retail chains - stores, central offices and warehouses - totalled \$2,377,250,000 in 1935 and \$2,133,675,000 in 1933. This includes pay roll as described above. The total expense is equivalent to \$27.19 per \$100 of chain sales in 1935, compared with \$30.55 per \$100 of chain sales in 1933. The distribution of expense as between stores, offices and warehouses is shown in the summary on page 30. It is customary in several kinds of business for chains to charge their warehouse expense, and sometimes certain buying expenses, to cost of goods rather than to consider them a part of operating expense. The Census does not differentiate, as it definitely does not report cost-of-goods data.

Stocks on Hand

Stocks of merchandise for sale at the end of the year totalled \$953,597,000 (at cost) in 1935 and \$803,835,000 in 1933. Of this amount in 1935, warehouse stocks accounted for \$93,471,000 or 9.8 percent. Comparisons are shown on page 30.

(c) Includes administrative and merchandising executives.

(d) Includes warehouse executives and some regional merchandisers.

Chain Headquarters, by States

Administrative or home offices of the 6,079 chains operating in 1935 are located in every State, but New York leads with 841. It is followed in order by Illinois with 493, California with 484, Ohio with 400, Pennsylvania with 390 and Texas with 302. States which are the home States of more than 100 chains further include Indiana with 132, Iowa with 137, Kansas with 109, Massachusetts with 277, Michigan with 241, Minnesota with 155, Missouri with 264, New Jersey with 129 and Wisconsin with 149.

In the first six States mentioned are located the home offices of 48 percent of all chains, operating in every State a total of 69 percent of all chain stores, in which is done 76½ percent of all the chain store business in the country. Below is a summary showing the stores and sales of all chains, distributed according to the States in which they are domiciled and not according to the States in which the retail units are located:

Number and Size of the Chains Domiciled in Each State
(not the number of units operated within the State)

Home Office State	No. of Chains	No. of Retail Units	Total Sales (add 000)	Home Office State	No. of Chains	No. of Retail Units	Total Sales (add 000)

Identical Chains Compared

Comparisons have been made between 3,495 identical chains in 1935 and 1933, and between 517 identical chains in 1933 and 1929. The number of stores decreased slightly from 1929 to 1933, and substantially from 1933 to 1935. Sales decreased about 25 percent from 1929 to 1933, and increased about 22 percent from 1933 to 1935. The chains in 1935 used 8 percent more store employees than in 1929, pay

rolls totalled 1.3 percent more in dollars than in 1929 and sales were 8.3 percent less in dollar volume than in 1929. Pay roll increased \$1.24 per \$100 of sales between 1929 and 1933, and decreased 23 cents per \$100 of sales between 1933 and 1935.

A detailed analysis by States of the operations of chains, both identical and total, in various kinds of business will be found in a special report of the Retail Census entitled "Retail Chains." Related to chains, but quite distinct in their characteristics, are 13 ownership groups of department stores with sales in 1935 of more than \$700,000,000, and 378 mail-order houses with sales from catalog in 1935 of more than \$420,000,000. Both types are summarized in Section 14 (pages 44 and 45 herein). A summary of the ratio of chain store sales in each State to independents and other types is included in Section 5 (pages 22 to 25 herein) and is covered in detail by 26 kinds of business in Retail Volume IV.

RETAIL CHAINS - COMPARATIVE SUMMARY FOR 1935, 1933 and 1929
Including Chain Store Warehouses and Central Offices

	<u>1935</u>	<u>1933</u>	<u>1929</u>
Total number of chains	6,079	5,546	7,061
Number of retail units (stores)	139,810	152,308	159,638
Number of central offices	1,914	(x)	(x)
Number of warehouses (228 chains)	<u>492</u>	<u>462</u>	<u>559</u>
Sales through stores; all chains (add 000)	\$8,460,611	\$6,767,766	\$10,740,385
Additional central-office sales (add 000)	<u>281,779</u>	<u>215,583</u>	<u>(x)</u>
Total value (wholesale) of merchandise handled through chain-store warehouses enroute to stores, including that sold at wholesale through the central office (add 000)	<u>\$1,864,221(a)</u>	<u>\$1,431,563</u>	<u>\$1,929,681</u>
Employees, full-time and part-time	<u>1,171,671</u>	<u>1,104,406(d)</u>	(x)
- stores	1,071,694	985,984	(x)
- central offices	73,655		(x)
- warehouses	26,322	118,422	26,442
Pay roll - total (add 000)	<u>\$1,211,066</u>	<u>\$1,051,990</u>	(x)

- warehouses	<u>33,948(c)</u>	<u>28,383</u>	<u>40,635</u>
Total pay roll per \$100 of <u>total</u> sales	<u>\$13.85</u>	<u>\$15.06</u>	(x)
Operating expense including pay roll -			
- total (add 000)	<u>\$2,377,250</u>	<u>\$2,133,675</u>	(x)
- stores (incl. some pro-rate)	2,106,671	1,851,855	(x)
- central offices, total	288,421	310,110	(x)
<u>Less:</u> prorated to stores	-94,445	-93,057	(x)
- warehouses	76,603	64,767	83,829
Total administrative and operating expense, per \$100 of <u>total</u> sales	<u>\$27.19</u>	<u>\$30.55</u>	(x)
Stocks on hand, end of year, at cost -			
- total (add 000)	<u>\$953,597</u>	<u>\$803,835</u>	(x)
- in stores	860,126	737,631	(x)
- in warehouses	93,471	66,204	98,840

(a) Not the cost of goods sold. Relates only to merchandise billed through warehouses, which is but a small part of the total quantity of goods sold by chain stores. This figure is sometimes regarded as a part of the total of wholesale distribution, performed by the chains instead of by merchant wholesalers. See text, page 1-26.

(b) Full-time pay roll; 1935 \$962,973,000; 1933 \$808,569,000. (c) Full-time pay roll; 1935, \$33,253,000; 1933, \$27,865,000. (d) Full-time employees; 1933 only: stores, 752,623; central offices, 115,078; warehouses, 18,450. (x) No comparable data available.

SECTION 7 - RETAIL TRADE BY SIZE OF BUSINESS

Sixty percent of all stores in 1935 did less than \$10,000 of business. They accounted in the aggregate for 11 percent of total retail sales. More than two-thirds of these small stores showed sales of less than \$5,000. In contrast, stores with sales of \$50,000 or more, although representing only 7.2 percent of all stores, accounted for 53.3 percent of total sales. A summary of the proportions of stores and sales by size groups for 1935, together with 1933 and 1929 comparisons, is shown below:

PERCENTAGES OF STORES AND SALES BY SIZE OF STORE

	1935		1933		1929	
	% of stores	% of sales	% of stores	% of sales	% of stores	% of sales
Total	100.00	100.00	100.00	100.00	100.00	100.00
Stores with sales of:						
\$1,000,000 or more	.06	10.12	.05	9.69	.14	12.34
500,000 to 999,999	.15	5.04	.09	3.74	.29	6.27
300,000 to 499,999	.30	5.53	.20	4.45	.55	6.50
100,000 to 299,999	2.25	17.56	1.62	15.03	4.05	20.06
50,000 to 99,999	4.40	15.07	3.65	14.96	8.35	17.81
30,000 to 49,999	7.31	13.91	5.84	13.35	11.45	13.74
20,000 to 29,999	7.90	9.48	7.12	10.41	11.24	8.55
10,000 to 19,999	17.69	12.31	17.07	14.52	20.27	9.04
5,000 to 9,999	18.47	6.53)			(16.48	3.69
Less than \$5,000	41.47	4.45)	64.36	13.85	(27.18	2.00

Size by Types of Operation

In this Census for the first time size analyses for independent stores and for chain units are presented separately. Mail-order units are combined with chain stores in order to maintain combinations made in the type-of-operation data in Volume IV (Types of Operation) to prevent disclosure of individual operations.

Only about 5 percent of the independents (and non-chain) had sales of \$50,000 or more in 1935 as compared to almost 32 percent in the case of chain and mail-order units. Approximately 47 percent of the independents' sales were accounted for by stores of \$50,000 or over, while the corresponding size for chain and mail-order units did about 74 percent of the total.

The lower size group also show clearly the difference in size by type of operation, with 64 percent of the independents (including other types) doing less than \$10,000 of business in 1935 as compared to only 11 percent for chain and mail-order units. The most common size group for independents is the "Less than \$5,000 sales" group (44.5 percent of all stores), while for chain and mail-order units the largest proportion of the stores (23.4 percent) is accounted for by the \$30,000 to \$49,999 group. The following table presents a comparison of size of business for the two type groups for all kinds of business combined and for four selected kinds of business. Similar comparisons for other kinds of business can be made by using Tables 4A and 4G.

KINDS OF BUSINESS BY SIZE AND TYPE GROUPS

	<u>Independents & other types</u>		<u>Chain and mail-order units</u>	
	<u>% of</u>	<u>% of</u>	<u>% of</u>	<u>% of</u>

Less than \$5,000	16.2	2.7	1.5	.1

Independents by Size by Kinds of Business

Although 64 percent of the independent stores (all kinds of business combined) did less than \$10,000 business in 1935, there are marked variations in size of store among the different kinds of business. For example, as shown in

the table above, 76 percent of the grocery stores had sales in 1935 of less than \$10,000 as compared to about 38 percent in the case of drug stores. Volume VI of the Retail Distribution series presents a detailed analysis (Table 4) of the size of business of independents and other types (excluding chain and mail-order units) by kinds of business and by States. The following discussion of size by kinds of business is a summary of the detailed data as presented in that volume.

The food group of stores, averaging in sales \$11,451 per store, is predominantly a small store group, with 47.8 percent doing less than \$5,000 per year and only 2.2% doing as much as \$50,000 per year. Meat markets and combination stores show a larger proportion of stores over \$5,000 than any other kind of business in the food field. Only .7 percent of all food stores had sales of \$100,000 or over in 1935, but these stores did 12.4 percent of the total business.

All department stores by definition exceed \$100,000 of sales per store, whereas 56 percent of dry-goods and general-merchandise stores do less than \$10,000 of business per year. Most of the variety store business (90.8 percent) is done by chains, but the remaining 9.2 percent is divided among more than 6,000 independent variety stores, 58.4 of which had sales of less than \$10,000 in 1935.

The great majority of filling stations and garages have sales of less than \$10,000 a year. Almost one-half (48 percent) of the filling stations did less than \$5,000 and 69.2 percent of the garages were under that amount. As contrasted to these, 35 percent of the motor-vehicle dealers (new) had sales of \$100,000 or more.

More than 60 percent of furniture stores do \$10,000 or more per year, and their sales constitute 95 percent of the total. Almost one-half (46.5 percent) of the business of furniture stores is done by 7.5 percent of the stores, with sales exceeding \$100,000 each. About 55 percent of household-appliance and radio stores had sales in 1935 of \$10,000 or more, and their sales represented well over 90 percent of the total. Other classifications in the furniture-household group, however, are predominantly small stores of less than \$10,000 of annual sales.

One out of every four lumber and building-material dealers did less than \$5,000, while almost exactly the same proportion (25.7 percent) had sales of \$50,000 or over. Those under \$5,000, however, accounted for only 2.5 percent of total sales as contrasted with the two-thirds (66.5 percent) of the total for the higher size group.

Eating and drinking places are essentially small-volume establishments with about 75 percent doing less than \$10,000 per year and accounting for 31 percent of the total business.

Nearly 38 percent of all drug stores do less than \$10,000 per year, but these small stores account for only 12 percent of drug store sales. Drug stores without fountain show 54 percent of all stores doing less than \$10,000 in 1935 as compared to 30 percent for drug stores with fountain.

Almost 62 percent of the jewelry stores had sales in 1935 of less than \$10,000, but their sales accounted for only 16 percent of total sales. In contrast, 31 percent of the total business was done by the stores with sales of \$100,000 or more although they made up less than 3 percent of the total stores.

Although 64 percent of all stores (exclusive of chain and mail-order units) did less than \$10,000 of business in 1935, with their aggregate sales amounting to less than one-seventh (14.1 percent) of the total retail sales (exclusive of sales of chains and mail-order houses), the instances cited above show that there are many kinds of business to which these general conclusions do not apply.

Tables 4A and 4B provide United States summaries of stores and sales by size (exclusive of chain and mail-order units), by kinds of business and by States, respectively. Table 4G presents a summary for the United States by kinds of business of chain and mail-order units. The totals as shown in Table 4G agree with the totals for chains and mail-order houses as published in Volume IV. The totals for independents and other types (Table 4A) exceed the totals published in Volume IV by 987 stores and \$87,777,000 sales because of the necessity of including in the independent figures small numbers of chain units which were combined with the independent figures for certain States in Volume IV to prevent disclosure of the operations of individual establishments. As these chain stores and sales included with independents are also in the chain and mail-order figures, the sum of the totals of Tables 4A and 4G exceeds the published totals for stores and sales (Table 1A) by the 987 stores and the \$87,777,000 sales, and cannot be adjusted without revelation of individual operations that were deliberately concealed in the tables in Volume IV.

SECTION 8 - RETAIL TRADE BY SIZE OF CITY

A significant factor in comparisons between 1933 and 1935 data on retail trade is the almost unchanging relationship that exists between stores and sales for these two census periods, by city-size distribution. The accompanying summaries for 1933 and 1935 show this clearly.

For 1935, 19 percent or 318,176 stores of the 1,653,961 retail stores shown for the United States as a whole are located in cities having a population of 500,000 or more; 7 percent, or 117,113 stores are located in cities having between 250,000 and 500,000 population; while 7 percent, or 118,079 stores are located in cities whose population is between 100,000 and 250,000. Thus, 33 percent, or 553,368 stores are located in cities having a population of more than 100,000.

If the city-size groups are combined into three groups - that is, those having more than 100,000 population; from 2,500 to 100,000, and places less than 2,500, including unincorporated areas - then each city-size group will be found to have a third of the total number of retail stores in the country. Sales made by the stores in these three city-size groups, however, show ratios that vary considerably. The city-size group of more than 100,000 population shows 44 percent, or \$14,698,561,000 of sales. Stores in the 2,500 to 100,000 city-size group do 38 percent, or \$12,468,850,000, and the group having less than 2,500 population does only 18 percent, or \$5,993,865,000 in sales. A summary of the above data with 1933 comparisons for the various city-size groups follows:

U. S. SUMMARY - Percent of Stores and Sales by Size of City

<u>City-Size Group</u>	<u>Percent of Population</u>	<u>Percent of Stores</u>		<u>Percent of Sales</u>	
		<u>1935</u>	<u>1933</u>	<u>1935</u>	<u>1933</u>

<u>All other areas</u>	<u>43.8</u>	<u>34</u>	<u>33</u>	<u>18</u>	<u>18</u>

More detailed tables for comparison purposes may be found in Pages 86 and 87 of the Retail Distribution Volume II.

A comparison of increases in stores and sales between 1933 and 1935 by city-size groups is significant. The city-size groups have been combined into three similar groups described above. The table below shows the variations

in percentage increases for these three groups. The greatest gains occurred in sales in those areas having between 2,500 and 100,000 population. The variations, however, between percentage gains for stores and sales in areas of less than 2,500, and the group just mentioned above, are very small. The least gain shown is for cities having more than 100,000 population.

Percentage Increase in Stores and Sales
by City-Size Groups (1933 to 1935)

	Stores		% Increase	Sales		% Increase
	1935	1933	1933 to 1935	(add 000)	1933	1933 to 1935
U. S. Total	1,653,961	1,526,119	8.4	\$33,161,276	\$25,037,225	32.4
More than 100,000	553,368	508,649	8.8	14,698,561	11,404,138	28.9
2,500 to 100,000	544,009	510,725	6.5	12,468,850	9,174,489	35.9
All Other Areas	556,584	506,745	9.8	5,993,865	4,458,598	34.4

By Geographic Divisions

Similar information for each of the nine geographic divisions of the United States is revealed in Retail Volume 11, showing number of stores and sales by kinds of business, by city-size groups. Variations exist in the different geographic divisions in the proportion of stores and sales, by city-size groups, and the information provides an unusual measure of the characteristics of each area. A comparison with 1933 figures for the geographic divisions shows that little change in the ratio of stores and sales, by city-size groups, has taken place.

Differences are evident, however, between geographic divisions, especially those which are essentially industrial in character and those which are primarily agricultural. For example, a comparison between the Middle Atlantic and the South Atlantic divisions is outstanding. In the Middle Atlantic division 48 percent of the population live in cities of more than 100,000. These cities have 51 percent of the stores and do almost 59 percent of the sales. The ratio of sales in the other city-size groups (except places under 2,500), are fairly similar to the ratio of population distribution. An entirely different situation occurs in the South Atlantic division. In this area, 15 percent of the population live in cities of more than 100,000. These cities have 21 percent of the stores and 34 percent of the total sales. More than 60 percent of the population live in places of less than 2,500, and sales made by stores in these places account for only 25 percent of sales. In the Middle Atlantic division, this city-size group accounts for 22 percent of the population and only 10 percent of the sales. For the South Atlantic division, the city-size groups reveal sales ratios larger than the population distribution ratios, which tend to show that these cities regardless of size are trading centers drawing their customers from surrounding rural areas. This is not as true for the Middle Atlantic division where only those cities of more than 100,000 population show a definitely higher ratio of sales than population distribution ratios.

By Business Groups

The following classifications should not be used interchangeably with commodity classifications. They represent the major commodities sold by the stores although these stores may sell many other items. For example, food stores sell more than food while other stores, such as general stores, department stores, and hay, grain and feed stores may also sell food. This is just as true for commodities sold by apparel, furniture, and drug stores. It should be noted that the range of commodities handled by stores in any given kind of business may vary with the size of the community in which the store is located.

City-size tables for 1935 and 1933, shown herein, reveal the importance of each business group in the various city-size groups, and the changes in stores and sales ratios that have taken place during these two periods.

Food Stores are the most important group in all areas. Cities of more than 100,000 population account for 39 percent of all food stores and 43 percent of sales. Places of less than 2,500 population account for 28 percent of the total food stores and 18 percent of sales. For all cities regardless of size, food stores make up 32 percent of all retail stores and 25 percent of total sales.

General merchandise stores are important in cities of 100,000 and over. This city-size group accounts for 32 percent of all general merchandise stores and 61 percent of sales. Although 28 percent of these stores are located in places of less than 2,500 population, they account for only 5 percent of the sales. For all cities, they constitute 3 percent of total retail stores but are responsible for 14 percent of sales, because the classification includes department stores and mail-order houses as well as many small stores.

Like general merchandise stores the apparel group is important in cities of more than 100,000 population. This city-size group accounts for 47 percent of all apparel stores and 61 percent of sales. In contrast, 10 percent of these stores are located in places of less than 2,500 and do only 4 percent of the apparel business. For all cities combined regardless of size, they constitute 6 percent of all retail stores and 8 percent of sales.

Among the business groups in which outstanding changes have occurred since 1933 are the automotive group, general merchandise group, lumber-building-hardware group and drug stores.

In the lumber-building-hardware group, the city-size group for places of less than 2,500 shows a gain of 8 percent in dealers and 53 percent in sales. In contrast, the other two city-size groups show losses in the number of dealers but show gains in sales ranging from 25 percent to 39 percent.

Drug stores show losses in all city-size groups ranging from 2 percent in places of more than 100,000 to 6 percent in places of less than 2,500 population. Gains in sales, however, are shown for these groups amounting to 12 percent for the former and 18 percent for the latter.

Retail Characteristics of Cities

Changes in the proportions which each business group bears to total retail stores and sales are evident when 1935 and 1933 data are compared. The following table shows kind-of-business group ratios for two city-size divisions (over 500,000 population and places under 2,500) for 1933 and 1935:

Table 4Proportion of Stores and Sales for City-Size Groups, by Eleven Business Groups

(Percent of Retail Business Done by Each Business Group in Specified City-Size Groups)

SECTION 9 - ANALYSIS OF SALES BY SOURCES OF REVENUE

Of the \$33,161,276,000 of total sales reported by retail stores for the year 1935, 92.5 percent represents sales of merchandise, 5.3 percent receipts from the sale of meals and from fountain, 1.7 percent repairs, storage and service receipts, with other sources accounting for the remaining 0.5 percent. Thus the great majority of retail receipts are derived from the sale of merchandise and meals, and fountain sales, whereas repairs, storage, service and "other sources" combined account for only 2.2 percent of the total.

Sales of Meals and From Fountain

Restaurants and other eating places accounted for 81 percent of the \$1,762,906,000 of meals and fountain sales. Drug stores (with fountain) received \$120,582,000 from the sale of meals and from fountain, making up an additional 6.8 percent of the total. These receipts represented slightly over one-eighth of the total sales of drug stores (with fountain).

Four other kinds of business accounted for the bulk of the remaining sales of meals and from fountain;-drinking places, candy and confectionery stores, variety stores, and department stores. These sales represented 9.0 of the total sales of drinking places, 13.3 percent of total candy and confectionery store sales, 4.4 of variety store sales, and only 0.9 percent of the total department store sales.

Based on data reported to the Hotels Census, it is estimated that meals in hotel dining rooms accounted for an additional \$200,000,000 of sales, not included in the Retail Census totals.

Repairs, Storage and Service Receipts

The automotive group, exclusive of filling stations, accounted for 70.2 percent of the \$571,217,000 of repairs, storage and service receipts for all retail stores. Motor-vehicle dealers (new) reported \$209,841,000 of such receipts which represented 36.7 percent of the total service receipts for all kinds of business combined and 5.6 percent of the total sales of motor-vehicle dealers. The \$167,601,000 of repairs, storage and service receipts for garages, which make up 45.3 percent of total garage sales, represented 29.3 percent of total service sales.

The \$44,160,000 of service sales reported for filling stations accounted for 7.7 percent of all service sales and represented 2.2 percent of the total sales of filling stations. Among the other kinds of business with sizable amounts of repairs, storage and service receipts are automobile accessories, tire and battery dealers, department stores, jewelry stores, household appliance and radio stores, heating and plumbing equipment dealers, furriers and fur shops, hardware and farm implement dealers, radio dealers and custom tailors.

Retailers' receipts from repairs, storage and service are offset to some extent by the sale of merchandise and meals by service establishments, places of amusement and hotels. Tables 9-A and 9-B contain analyses taken from the Service Census of 1935 showing the nature of receipts of service establishments, places of amusement and hotels.

Detailed Analysis of Sales Data

Tables 7A and 7B present United States summaries, by kinds of business and by States, of retail sales analyzed by revenue sources. Similar tables (Table 7) for each State and each city of more than 500,000 population are presented in Volume VI, together with a more detailed discussion of the data.

SECTION 10 - MERCHANDISE STOCKS ON HAND

The ratio of the value of stocks on hand to sales in a retail store is an important measure of its merchandising efficiency. The success or failure of its buying policies and methods, its sales promotional plans and other aspects of merchandising are affected by the speed with which its stock of merchandise is sold and replaced.

Although turnover ratios cannot be computed from end-of-year stocks at cost and annual sales at retail, it is possible to show stock-sales ratios on that basis (sales divided by stock) which measure variations in investment in merchandise stocks in relation to sales, both for different periods and for different kinds of business. The total merchandise stock in retail stores at cost values as of December 31, 1935 was \$4,297,959,000, which compares with \$3,903,969,000 at the end of 1933 and \$7,262,583,000 at the end of 1929. If the sales for each year are divided by the end-of-year stocks, comparable stock-sales ratios for the three years are shown as follows: 1935, 7.7; 1933, 6.4; 1929, 6.8.

Table 7A presents a United States summary of stocks on hand, by 66 kinds of business, thus providing for comparison of the relationship of merchandise stocks to sales in different kinds of business. Table 7 in Volume VI provides similar information for each State and each city of more than 500,000 population. Table 7B contains a summary of stocks by States.

SECTION 11 - SALES BY RETAILERS VERSUS OTHER SALES AT RETAILWholesale Sales

Included in total sales of \$33,161,276,000 reported by retail stores for 1935 are sales to other retailers to the extent of \$537,749,000. Most of this amount may be regarded as "wholesale" business in the sense that it is for resale and appears again in other retailers' sales. Of the total sales to other retailers, 28.9 percent was accounted for by motor-vehicle dealers (new). The \$155,255,000 of such sales from one new-car dealer to another represented 4.2 percent of the total sales of the motor-vehicle dealer classification. Dairy products stores and milk dealers, with \$52,015,000 of sales to other retailers, accounted for 9.7 percent of the total of all such sales. Among the other kinds of business reporting sizable amounts of sales to other retailers are fuel and ice dealers, beer and liquor stores (packaged), combination stores (groceries and meats), lumber and building-material dealers, hay, grain and feed stores, meat markets, grocery stores, farm and garden supply stores, and paint, glass, and wall-paper stores. Table 7 (Volume VI) provides data on the amount of sales to other retailers by 66 kinds of business for each State and each city with more than 500,000 population. United States summaries of this data by kinds of business and by States are shown in Tables 7A and 7B herein.

Offsetting these sales by retailers to other retailers are sales by wholesalers to ultimate consumers which in 1935 amounted to \$510,282,000. Tables 8A and 8B present analyses by kinds of business and by geographic divisions, respectively, of these \$510,282,000 retail sales made by wholesale establishments, as reported in the Wholesale Census.

Retail Sales by Other Establishments

As mentioned in Section 9, the \$571,217,000 of repairs, storage and service receipts reported by retail stores are partially offset by \$49,104,000 of merchandise sales in service establishments. An additional \$30,233,000 of merchandise sales in 1935 is accounted for by places of amusement, hotels and tourist camps.

The sale of meals by hotels constitutes a retail sale of greater volume than the total of merchandise sales by service establishments, places of amusement, hotels and tourist camps. On the basis of information obtained by the Hotels Census it seems likely that hotel dining rooms in 1935 accounted for approximately \$200,000,000 of meal sales. These receipts are in addition to sale of meals shown in the Retail Census figures. Hotels reported sales of beverages to the extent of \$72,082,000 in addition to meal sales. Tourist camps account for a small additional amount of meal sales, the exact amount of which is not available.

SECTION 12 - RETAIL STORES OPERATED BY NEGRO PROPRIETORS

There were in the United States 23,490 retail stores operated by Negroes, with sales in 1935 of \$48,987,000. Expressed in ratio to all stores, these represent 1.4 percent of all retail stores and .2 percent of total sales.

The 23,490 stores reported 23,819 proprietors and employed 12,322 full-time and part-time employees, (average for the year), paying them \$5,021,000. in wages. Compensation for the services of proprietor-owners is not included.

By Kinds of Business

Retail businesses in which Negroes are most active are shown in the following table. The ratios of these kind-of-business classifications to the totals for all Negro stores and sales are also included.

NEGRO PROPRIETORSHIPS

Kind of Business	<u>STORES</u>		<u>SALES</u>	
	Number	Percent	Amount (add 000)	Percent
Total stores operated by Negroes	23,490	100.0	\$48,987	100.0
Grocery stores (without meats)	4,553	19.4	6,270	12.8
Restaurants, cafeterias and lunch rooms	4,309	18.4	8,638	17.7
Lunch counters	3,178	13.5	2,758	5.6
Combination stores (groceries and meats)	1,811	7.7	7,351	15.0
Fuel and ice dealers	1,801	7.7	3,188	6.5
Candy and confectionery stores	1,338	5.7	1,462	3.0
Drinking places	1,081	4.6	4,322	8.8
Filling stations	783	3.3	2,946	6.0
Garages	734	3.1	1,019	2.1
All other retail stores	3,902	16.6	11,033	22.5

Grocery stores, combination stores, and restaurants account for 45.5 percent of the retail stores, and their sales represent 45.5 percent of total sales made in stores operated by Negroes.

By Geographic Divisions

The greatest concentration of stores operated by Negroes is in the South Atlantic States. They account for 36 percent of all Negro stores and 30 percent of such sales. Georgia, one of the States in this geographic division with 2,037 Negro stores, has the largest number of stores, but the 1,140 stores located in New York with sales of \$4,508,000 account for the greatest amount of business.

The ratios of stores and sales, by geographic divisions, to the totals for the country as a whole are shown in the following table:

Proportion of Negro-operated Stores in each Geographic Division
to total of all Negro-operated Stores

Geographic Division	Percent of Total Stores Operated by Negroes	Percent of Total Sales in such stores
Total for United States	100.0	100.0
New England	.8	2.6
Middle Atlantic	12.0	17.5
East North Central	12.5	17.6
West North Central	4.3	5.0
South Atlantic	36.1	29.8
East South Central	15.0	10.4
West South Central	16.7	12.6
Mountain	.5	.7
Pacific	2.1	3.8

The three Southern geographic divisions account for 67.8 percent of the stores and 52.8 percent of total sales. By States, however, the two northern States of New York and Illinois lead in sales, while Ohio has almost as large a proportion of total Negro sales as Texas:

State	Percent of Stores	Percent of Sales
United States Total	100.0	100.0
New York	4.9	9.2
Illinois	4.0	6.7
Texas	7.4	5.7
Ohio	4.1	5.5
Virginia	6.4	5.3
Georgia	8.7	5.2
Florida	5.8	5.2
Pennsylvania	4.5	4.7
North Carolina	5.9	4.5
Tennessee	4.8	4.3
All other States	43.5	43.7

Data for stores operated by Negroes, by kinds of business and by geographic divisions, will be found in greater detail in Tables 6-A and 6-B of this volume.

SECTION 13 - OWNERSHIP GROUPS and MAIL-ORDER HOUSES

Related to chains, but lacking the chain characteristic of central merchandising, are thirteen groups of department stores classified as Ownership Groups. They are similar in many ways to the holding companies typical of the utilities field.

The stores of an ownership group are not centrally merchandised, but each maintains its own staff of merchandisers and buyers. No group operates all of its stores under a single name, but usually retains the names under which the stores were developed before they were acquired by the holding company. There is little uniformity as to operating policies, price range, consumer credit practice or even sources of supply of merchandise. There is no common denominator except stock ownership, and the stores are generally regarded as local enterprises.

For a more detailed description of ownership groups, the history of their development and a discussion of their advantages, together with a record of their performance since 1929, reference is made to a special report of the Retail Census which covers chains, ownership groups and mail-order houses, entitled "Retail Chains, Ownership Groups and Mail-Order Houses."

There were 14 ownership groups in 1929; one was dissolved and the 13 remaining are reported for 1933 and again for 1935. The total number of stores owned by these groups in 1933 was 129; in 1935 it was 130. Of the 13 groups in 1935, one small group with 5 stores and sales publicly reported as \$15,000,000 failed to report to the Census and is not included in the analysis.

Sales in 1935

The remaining 12 groups operated 125 stores with sales in 1935 of \$717,407,000, which constituted 21.7 percent of the total sales of all department stores in 1935. For comparison it may be noted that department-store chains accounted for 2,423 stores with total sales of \$883,101,000 in the same year. Mail-order houses in the general merchandise field, grouped with department stores in most Census tables, numbered only 33 and accounted for total sales (catalog) of \$386,200,000, or 11.7 percent of total department store and mail-order sales in 1935. (Retail stores of mail-order companies are classified as chain stores and not as mail-order houses).

Employment, Pay Roll

The 12 ownership groups included in the census employed in 1935 a total of 113,473 full-time and part-time employees, of the total of 492,090 in all department stores. Their pay roll totalled \$121,241,000 of the total of \$468,910,000 for all department stores.

Total operating expenses in the 125 stores of the ownership groups were \$243,825,000, of the aggregate of \$966,104,000 in all department stores. They thus averaged 34.0 percent of sales; and of this 34.0 percent rent constituted 2.1 percent and pay roll 16.9 percent of sales. All other operating expenses made up the remainder of 15 percent.

MAIL-ORDER HOUSES

There were 378 mail-order houses in 1935, selling exclusively by mail from catalog or direct-mail pieces, with total sales during the year of \$420,027,000. This constitutes 1.3 percent of total retail sales, in comparison with 1.0 percent in 1933 and 1.0 percent in 1929. Neither the count of houses nor the sales includes retail stores owned by mail-order companies, which are classified in the census as chain stores and not as mail-order houses.

The number of houses in 1929 was 271, increasing to 311 in 1933 and to 378 in 1935. Catalog sales decreased 52.6 percent between 1929 and 1933, but increased 71.9 percent between 1933 and 1935. Compared with the 1935 sales stated above, catalog sales in 1929 totalled \$595,237,000 and in 1933 they totalled \$244,381,000.

5 Companies Do 90 Percent

Two companies do a majority of the catalog business of the country, but their proportion of the whole cannot be stated without revealing confidential data. However, the five largest companies account in the aggregate for 89.7 percent of total mail-order sales. In comparison the next five largest companies account for only 3.5 percent of the total. The remaining companies do 6.8 percent of the total mail-order sales.

By Kinds of Business

Nearly all of the \$420,027,000 of mail-order sales in 1935 was confined to five kinds of business. General-merchandise houses accounted for 91.9 percent of the total; women's apparel houses for 1.5 percent; farm and garden supply houses for 1.0 percent; men's clothing and furnishings houses for 0.7 percent; and mail-order shoe houses for 0.4 percent. The remaining 4.5 percent is scattered over other kinds of business, of which the principal classifications are radio, drugs, jewelry, family clothing, and hardware and farm implement houses. The only classification in which the ratio of sales in 1935 was smaller than the ratio in 1933 is the 16 houses selling men's clothing and furnishings.

Below is a summary of mail-order houses and their sales in 1935 and 1933 by kinds of business:

Kind of Business	Mail-order Houses		Catalog Sales			
			1935		1933	
	1935	1933	Amount (Add 000)	%	Amount (Add 000)	%
Total, all kinds	378	311	\$420,027	100	\$244,381	100
General merchandise (dep't store)	33	35	386,200	91.9	219,978	90.0
Men's clothing and furnishings	16	6	3,047	.7	2,409	1.0
Shoes	7	10	1,500	.4	473	.2
Women's apparel	6		6,346	1.5		
Farm and garden supply	16		4,203	1.0		
Radio	7		628	.1		
Drug	19		450	.1		
Hardware and farm implements	4		427	.1		
Jewelry	4		331	.1		
Family clothing	4		209	.1		
All others, not classified	262	260	16,686	4.0	21,521	8.8

SECTION 14 - OTHER FIELDS COVERED BY THE CENSUS OF BUSINESS

In any study of retail distribution it may be valuable to know of the material published by the Census of Business covering other business fields. Much of it has a direct bearing on distribution; some of it measures markets, provides material on employment and pay roll disbursements, or reveals the facilities available to improve distribution in a given city or State.

Wholesale

Chief among the Business Census reports are 8 volumes on wholesale distribution and several special-subject reports. Related to this field is a volume entitled "Distribution of Manufacturers' Sales," showing the movement of manufactured goods from plants into the various channels of primary distribution.

Service Businesses

There are three volumes on service establishments in various kinds of business, of which the principal classifications are storage garages, auto top and body repair shops, barber shops, beauty shops, cleaning and pressing shops, laundries, photographic studios, shoe repair and shoe shine shops, upholstery shops, watch repair shops and funeral directors. In addition there is a volume on hotels, one on theatres and other amusement places, and one on tourist camps.

Construction

Three volumes are available on contract construction; of these the third volume covers value of work performed in 1935, by type of construction and the location of the work. Other data on the characteristics of construction companies are included.

Radio Broadcasting

There is included in the Business Census one volume on radio broadcasting, the first ever compiled as a complete coverage, showing number of stations, value of time sold, types of rendition and data on employment, pay roll and similar information. Another volume of the Census analyzes advertising agencies, basic operating data and the nature of the advertising placed.

Financial and Insurance

Volumes are included on banking, on other financial institutions and on insurance.

Transportation, etc.

Bus Transportation, Motor Trucking for Hire, and Public Warehousing are covered in three other volumes of the current Business Census. The series also contains a special Retail Trade Survey comparing identical retail stores for 1934 and 1935, and a volume on Business Employment and Pay Roll bringing together all available data on this subject and showing the totals by counties and cities. Copies of Business Census volumes are available for reference in most libraries.

(a) Adjustments were made in 1933 figures for comparison with 1929; see footnote, Table 3A, pp. 13-14. (Not reflected above)

1/ Includes no compensation for the services of proprietors working in their stores, in lieu of employees.

2/ Includes leased departments, market and roadside stands, itinerant vendors and rolling stores, cooperatives, a few retailer-wholesalers (whose business is evenly divided between the two) and country buyers who also operate retail stores. The latter were difficult to identify from the 1933 schedule, and the comparison between 1933 and 1929 percentages is subject to qualification in that the entire 1929 percentage for retailer-country buyers is included for comparison purposes in the percentage shown for independents. Further details are not available from the condensed tabulations used in 1933.

3/ Totals differ slightly from other tables because of an error in California in classifying certain apparel stores as department stores. The correction is reflected in this Summary, as well as in the California Type Report. One large national chain with total sales in 1933 (published in the press) of more than \$78,000,000 so changed the character of its business since 1929 that it now is classified as a department-store chain whereas it was a variety-store chain before. If for comparison purposes it were eliminated from the 1933 figures, the proportion of chain sales would be 21.4 percent against 16.7 percent in 1929--conversely, the variety-store proportion of chain sales would be 92.1 percent in 1933 against 89.2 percent in 1929.

4/ A discrepancy of \$370,000 exists between the national totals shown here and the State reports, caused by an error in classification of certain stores in Montana and Wyoming. The correction is reflected in the State tables, but is not considered of sufficient importance to justify changing the national totals.

5/ The totals differ slightly from other tables because of an error in Illinois in classifying certain electrical appliance stores as radio stores. The correction is reflected in this summary, as well as in the Illinois Type Report.

6/ Restaurants and eating places in the 1933 tabulation include also lunch counters and refreshment stands in addition to restaurants, cafeterias and lunch rooms. The 1929 percentages reflect only the latter three kinds of restaurants and, therefore, are not strictly comparable, but the new basis is considered preferable for future comparisons, in order to distinguish eating places as such from drinking places.

7/ This classification was not included in the 1929 Type summary (table 6) and, therefore, no percentage figures for comparison with 1929 are available.

8/ Hardware stores in this table include two business classifications, i.e., hardware stores, and hardware and farm implement dealers. Since the 1929 Type summary (table 6) included only the former, 1929 percentages are not available for comparison.

RETAIL DISTRIBUTION: 1933

TABLE 41.—UNITED STATES SUMMARY—NUMBER OF STORES AND SALES, BY SIZE OF STORES, BY KINDS OF BUSINESS.

(Sales are expressed in thousands of dollars)

Each retail store is classified by kind of business (grocery store, hardware store, cigar store, etc.), according to the principal lines or commodities sold, or the usual trade designation. Kind-of-business classifications are not interchangeable with commodity classifications. Food stores, for instance, sell more than food, and food also is sold in other kinds of stores, including variety, general and department stores. Likewise, apparel, furniture and drugs are sold in many stores not classified as apparel, furniture or drug stores.

Sixty-six kinds of business are shown for States and for cities of more than 500,000 population. These 66 are combined into 54 classifications for cities of 50,000 to 500,000 population. For all areas from 2,500 to 50,000 population, the 66 classifications are combined into 11 kind-of-business groups (except in Table 13 in which beer and liquor stores are shown as a separate group, thus making 12 groups).

The 66 kinds of business are defined below, arranged by kind-of-business groups.

FOOD STORES

Food stores include 11 classifications, defined in the following paragraphs. The classification Bottled Beer and Liquor Stores, which appeared in this group in the 1933 Census, is now included with "Other Retail Stores," when it is not shown separately.

Candy and confectionery stores -- In this combined classification are two distinct kinds of business. The first is the candy store or candy and nut store, confining its business primarily to the sale of boxed or bulk candies and nuts or to either of the two commodities, and the second is the confectionery store, selling also other types of confections and often dispensing fountain drinks and ice cream. Some confectionery stores have added lunches and prepared foods after the manner of the delicatessen store.

Dairy products stores and milk dealers -- Included in this classification are two related kinds of business; first, the dairy products stores, and second, milk dealers. Dairy products stores handle dairy products including milk, butter, eggs and frequently poultry. Milk dealers often handle other dairy products particularly butter and cheese and sometimes eggs. There is a tendency on the part of milk dealers to increase the number of lines distributed by their salesmen. Farm dairies are not included in 1935; only those with recognized retail places of business are included within the scope of the Retail Census.

Egg and poultry dealers -- These dealers frequently handle dairy products, although they do not usually maintain a complete line. In the 1933 Census this classification was included with dairy products stores and milk dealers.

Delicatessen stores -- These stores formerly confined their sales principally to cooked meats, prepared salads, cheese and other prepared foods suitable for immediate table use. In recent years many have added a limited stock of canned and bottled goods, groceries and frequently beer and wine. Neighborhood delicatessen stores often carry fresh fruits and vegetables, some candies, confections, cakes and other bakery products, as well as milk and other dairy products. Many serve lunches and sometimes develop a substantial restaurant business. With the tendency on the part of delicatessen stores to expand their sale of groceries it has become exceedingly difficult to distinguish in many cases between delicatessen stores and grocery stores. Those stores reporting substantial sales of groceries were included as grocery stores, because in many instances they had become more nearly like a grocery store than a delicatessen store. Typically delicatessen stores operate long hours after other food stores are closed.

Fruit stores and vegetable markets -- While these stores and stands are more often found in public or municipal markets or operated as roadside stands, many neighborhood stores in large cities confine themselves entirely to the sale of fruits and vegetables.

Grocery stores (without meats) -- This is the store popularly known as a grocery store, selling a full line of groceries usually with fresh vegetables and fruits in season. They may carry smoked and prepared meats in limited quantities without changing the classification, but not fresh meats. Grocery stores which carry fresh meats are classified as combination stores. As pointed out above, this classification includes in many instances those delicatessen stores which reported substantial sales of groceries.

Combination stores (groceries and meats) -- This classification includes those stores primarily engaged in the sale of groceries and fresh meats. In some instances they represent grocery stores which have added fresh meats to the grocery line, while others are meat markets which have added staple groceries. Combination stores usually carry fruits and vegetables and bakery products and many are complete food markets.

Meat markets -- Stores or markets selling principally fresh and smoked meats and usually some fish. They may also carry dairy products and eggs.

Fish markets and sea food -- This classification includes those stores or markets selling principally fish, oysters or other sea foods. In inland cities and towns fish markets as such are rare but in the seaboard cities there are a number of strictly fish and sea food markets.

Bakeries and caterers -- This classification includes three kinds of stores. The first is the small combined manufacturing and retailing bakery whose value of products during 1935 was less than \$5,000. This group accounts for by far the larger number of stores included in the classification. The second kind of store is the bakery goods store or dealer primarily engaged in selling bakery goods purchased from a manufacturing bakery, or the retail branch of such bakery. Caterers which constitute the third kind of business included in this classification arrange special menus for luncheons and dinners to be served elsewhere, prepare and serve the foods. This is a specialized business in which service plays an important part, and constitutes but a small part of the total for this group.

Other food stores -- This classification includes stores selling coffee, tea and spices, and retail distributors of bottled soft drinks and water. Also included are stores handling farm products which do not come within any of the other specified food store classifications, and stores handling special health foods.

GENERAL STORES

These stores are general merchandise stores which also sell a substantial proportion of foods. They are located typically but not exclusively in the smaller communities. In rural communities this type ordinarily is known as a Country General Store or simply as a General Store and in urban communities ordinarily as a General Merchandise Store selling foods.

In 1933, because of the lack of commodity information, any store which indicated on the schedule the term General Store or Country General Store was coded as such. In 1935, however, it was possible to classify these stores more strictly because of the greater amount of information on the schedule. For example, many stores operating under the name of General Stores indicated on the schedule that they were almost entirely a food store rather than a store handling a general line of merchandise. Such establishments were classified in the food group rather than as general stores. However, a general store selling more than 50 percent food was not classified as a food store unless the indications were that the food sales were so large that the store had the characteristics of a grocery store or combination store, rather than those of a store handling a number of general lines built around food.

An analysis of the information obtained on the short-form schedule used in 1935 for stores with sales of less than \$50,000 indicates that the sales of general stores of that size are divided approximately as follows:

	<u>Percent of total sales</u>
Groceries and related commodities	55.7
Dry goods and notions	14.4
Apparel and shoes	8.8
Farm implements and supplies (including seed, feed, etc.)	6.8
Gasoline and oil	6.0
Home furnishings	.8
All other commodities	7.5

GENERAL MERCHANDISE GROUP

Department stores -- Department stores are departmentized general merchandise stores, usually of the full service type, carrying men's, women's and children's apparel and shoes, furnishings and accessories, dry goods, homewares and many other lines. Furniture and hardware are often but not necessarily represented, although home furnishings, draperies, curtains, and linens are almost invariably carried. Some department stores also have food departments. For purposes of the Census, such departmentized stores having annual sales of less than \$100,000 have been classified as general merchandise stores.

This classification may include also mail-order houses selling general merchandise by mail. Because of the small number of mail-order houses it is impossible in most cases to show them separately. They carry about the same range of merchandise as do department stores and in addition sell farm implements, farmers' supplies, automotive equipment and many other lines. Data on mail-order houses as distinct from department stores may be found in Volume IV of the final series of Retail reports for 1935. Department stores owned by mail-order companies are classified as department stores and not as mail-order houses.

Dry goods and general merchandise stores -- Dry goods stores sell women's ready-to-wear and accessories, a general line of dry goods such as linens, piece goods, domestics, notions, etc., and some homewares. The distinction between department stores and dry goods stores is that department stores sell a greater variety of merchandise than merely dry goods and women's apparel, usually including furniture and other household lines and men's furnishings. A dry goods store becomes a department store when, and if, it adds furniture, household appliances, hardware, and/or men's clothing or shoes, provided the total sales exceed \$100,000; if its sales are less than \$100,000 it becomes a general merchandise store.

The General Merchandise classification includes, for the purposes of this Census, departmentized stores having annual sales of less than \$100,000, as well as non-departmentized stores selling somewhat similar lines of general merchandise. In general merchandise stores such lines as dry goods, household furnishings and appliances, and men's, women's and children's apparel, furnishings and accessories predominate. General merchandise stores selling a substantial quantity of food are classified as "General Stores with Food", and not in the general merchandise classification, regardless of where located.

In many instances stores operating under the name "Dry Goods Store" have expanded their lines of merchandise so that they have become more nearly general merchandise stores. Because of this confusion in name of store, and the fact that in many instances it is difficult to tell from the schedules exactly how wide a line of merchandise is carried, dry goods stores and general merchandise stores are combined into one classification in presenting data on these stores.

Variety, 5-and-10, and to-a-dollar stores -- These stores carry a variety of small wares, especially lower-priced lines of stationery, gift items, women's accessories, light hardware, toys, housewares, etc. Sales are usually for cash without delivery service. In many variety stores, fountain sales, ice cream and lunches constitute appreciable sales items. Most of the variety stores' volume is done by chains of sectional or national scope. Although there is a relatively large number of independent variety stores their sales constitute less than 10% of the total volume for this classification (see Volume IV of the final Retail Census reports for 1935).

APPAREL GROUP

Men's furnishings stores -- These stores are primarily haberdashery stores confining their sales to men's furnishings and accessories with little or no clothing. Men's hat stores are included in this classification. Furnishings stores may sell shoes but stores primarily engaged in the sale of men's shoes are not included in this group but rather under the classification "Shoe Stores."

Men's clothing and furnishings stores -- This classification includes stores selling men's suits and overcoats and other outer clothing, whether or not they also sell furnishings and accessories such as described under men's furnishings stores.

Family clothing stores -- These stores carry clothing, furnishings and accessories for men, women and children, usually including shoes. Characteristic of many family clothing stores is their use of instalment credit as a sales inducement. Because of the growing inclination of men's stores to add women's lines, this classification now includes many large, high-grade downtown stores formerly classified as men's stores.

Women's ready-to-wear stores -- Women's apparel and accessories, usually including millinery, shoes, lingerie, hosiery and small wares are sold in these stores. Frequently gloves, handbags and other leather goods are carried, as well as toiletries and other lines related to women's apparel. This classification frequently includes large stores of sales' importance equal to department stores but limited to women's wear, accessories and dry goods.

Furriers and fur shops -- These shops usually sell ready-made fur coats, scarfs and fur-trimmed cloth coats, but some shops also do custom work. Repairs and storage constitute a substantial source of income. However, when receipts from these sources amount to more than 50% of the total, the shop is classified in the Service Census and does not appear in the Retail Trade figures. Manufacturing furriers whose value of products exceeded \$5,000 for the year 1935 are included in the Census of Manufactures.

Millinery stores -- These stores sell ready-made and custom millinery and trimmings. They are frequently operated as leased departments in women's apparel and department stores.

Custom tailors -- These shops sell made-to-order clothing, men's or women's. In some instances they have added small amounts of furnishings and accessories. Repairs constitute an item of income, but if receipts from repairs and pressing exceed 50% of the total receipts the shops are classified with "Cleaning, dyeing, pressing, altering, and repair shops," which are shown in the Service Census.

Accessories and other apparel stores -- This classification includes corset and lingerie shops, hosiery shops, knit-goods shops, costume accessories stores (selling bags, jewelry and gloves), umbrella shops, children's specialty shops (clothing and accessories), infants' wear shops and a few mail-order houses engaged exclusively in the sale of apparel from catalogue.

Shoe stores -- This classification includes stores selling men's shoes only, or women's shoes only, or women's and men's and children's shoes. Men's shoe stores usually sell also hose and gloves, and women's shoe stores are rapidly developing the sale of hosiery, bags, gloves and underwear. This classification includes leased shoe departments, operated by outside operators in department stores and apparel stores.

AUTOMOTIVE GROUP

Motor-vehicle dealers (new) -- This group includes dealers specializing in new automobiles and trucks. The sales of used cars taken in trade on new cars are included in the sales of these dealers. These establishments usually carry stocks of replacement parts and accessories, and maintain repair departments to provide free new-car service, as well as subsequent repairs from which income is derived. Limited quantities of tires, batteries and automotive accessories are ordinarily carried, the sales of which are included in the total sales reported. Large establishments may add to their income by utilizing unused floor space for storage. These sources of additional business make up a relatively small part of the total sales volume in this classification, which is predominately the sale of new motor vehicles.

Used-car dealers -- This classification is used only where the establishment sells used cars or trucks primarily. As a rule, no stock of parts is carried, for the reason that a variety of makes of automobiles is handled. Frequently a limited stock of new tires, tubes and batteries of the cheaper varieties is carried. A repair department is usually maintained to place the used cars in salable condition, and service and repair the cars after sale. Such income has little effect upon the total sales, which are primarily of used cars bought from new-car dealers for resale.

Accessories, tire and battery dealers -- This classification includes stores handling all kinds of automobile accessories, tires and batteries with or without a service department. It also includes tire shops selling new and used tires and tubes and maintaining vulcanizing facilities for tire repairs, shops selling batteries and doing some battery and ignition service work, and combination tire and battery shops. When receipts from service exceed one-half of the total the shops are shown in the Service Census and not included as retail stores.

Garages -- This classification includes repair garages only. Parking and storage garages, body-fender-paint shops and radiator repair shops are included in the Service Census. Repair garages sell gasoline, oil and accessories in addition to making mechanical repairs and body repairs. Receipts from storage sometimes add to the income of garages. Washing and lubrication service is frequently provided, but most of the income is from repairs, new parts and gasoline and oil.

Other automotive -- Under this heading are included shops selling motorcycles, new and used, and incidental parts and accessories; dealers selling aircraft and accessories; automobile trailer dealers; and dealers selling motor boats, yachts and canoes. All of these kinds of businesses usually provide repair service. Bicycle shops, which were included under this classification in 1933 are shown in 1935 as a separate kind of business under the "Other retail store" group.

FILLING STATIONS

This classification includes retail stations primarily engaged in the sale of gasoline and oil. The majority of such places are typical drive-in filling stations along the road or street. Included also are cooperative oil companies whose sales in most instances are largely to farmers. This classification also includes super-service stations whose principal sales are gasoline and oil, and establishments operating under the name "Garage" but which derive the largest part of their receipts from gasoline and oil sales.

All filling stations sell gasoline and oil and usually maintain lubricating facilities; some also sell tires and provide emergency tire repair service. Some stations sell in addition other merchandise such as lunches and refreshments, candy, tobacco, and groceries. Where filling stations are operated in conjunction with a tourist camp the establishment is included in the Retail Census provided the income from the rental of cabins or other lodging does not exceed one-half of the total receipts.

FURNITURE-HOUSEHOLD GROUP

Furniture stores -- A furniture store carries furniture, floor-coverings, radios, draperies, curtains, household appliances and other home furnishings. A large part of the sales of these stores is on the installment plan. In smaller cities, furniture stores often carry hardware. In some instances they are combined with undertaking establishments.

Floor-coverings and drapery stores -- Two kinds of stores are included in this classification; floor-coverings or carpet stores, and drapery stores which also carry curtains and upholstery materials. Part of the income of drapery stores is for services, usually upholstery service and the making of curtains and draperies.

Household appliance and radio stores -- This classification includes (1) stores specializing in the sale of electrical and/or gas household appliances, electrical and gas refrigerators and stoves and ranges; and (2) stores handling a combined line of household appliances and radios. This second group frequently includes stores which were originally radio dealers but which later added a line of household appliances.

A considerable part of the stores in this classification are operated by public utility companies selling appliances and accessories adaptable to their particular utility, while the independently operated appliance stores frequently confine their sales to a limited number of nationally-advertised appliances. The larger appliances account for an appreciable proportion of installment sales. A large volume of appliance sales by furniture, hardware and department stores is not included, of course, under this heading.

Radio dealers -- This classification includes only stores primarily engaged in the sale of radio sets and parts. If any substantial amount of household appliances is sold, the store is included under the household appliances and radio classification described above. Stores operating primarily as music stores with the sales of radios of secondary importance are included with other classifications and not in the radio dealer classification. In some instances such music stores have branched out into the selling of household appliances and thus are included in the household appliance and radio classification. Radio dealers usually provide repair services. If receipts from such services exceed 50% of total receipts, the establishment is included in the Service Census and not in the Retail Trade figures.

Other home furnishings and appliance stores -- Under this heading are included retailers of brushes and brooms, stores selling pictures and frames, aluminum-ware retailers (usually house-to-house selling organizations), china, glassware, crockery, tinware and enamelware stores. Lamps and shade shops are included, as well as shops selling awnings, banners, flags, window shades and tents. Included also are antique shops which sell authentic antique furniture and objects of art at retail and stores selling a mixture of antiques and used furniture. But used-furniture dealers are included with second-hand stores.

LUMBER BUILDING AND HARDWARE GROUP

Lumber and building-material dealers -- Under this heading are grouped yards selling lumber and other building materials, lumber yards also carrying builders' hardware, and retail dealers specializing in building materials such as roofing, asbestos products, brick and tile, building stones, cement, granite and marble, lime and plaster, nonmetallic roofing materials, sand, gravel and crushed stone.

This classification includes only those dealers whose business is primarily retail. It is emphasized that because of the number of dealers who combine retail and wholesale transactions it is essential to consider also the Wholesale Census in any study of the building material field.

Hardware stores -- This classification is confined primarily to stores carrying a line of hardware and tools for general use, builders' hardware and electrical goods, as well as paints and painters' supplies. Dual-line hardware and furniture stores are included in this classification if hardware lines constitute the majority of the sales.

Hardware and farm implement dealers -- This classification includes retail dealers selling farm implements and hardware, those selling primarily farm implements but also some other items such as hay, grain and feed, and those selling farm implements only.

Heating and plumbing equipment dealers -- This classification is not identical with the "Heating and plumbing shops" classification in the 1933 Retail Census. It differs by transfer to the 1935 Construction Census of some heating, plumbing, and air-conditioning contractors who were embraced in the 1933 Retail Census. This 1935 classification includes only those dealers whose receipts are derived primarily from the retail sales of plumbing, heating and air-conditioning equipment as such, rather than from installation and repair work.

Paint, glass, wall-paper stores -- This classification includes glass and mirror shops and paint, glass and wall-paper stores. The former sell framed mirrors in addition to glass of all descriptions, and resilver old mirrors. Those establishments operating primarily as contract glaziers are included in the 1935 Construction Census.

Electrical supply stores -- This classification is not identical with the "Electrical shops" classification of 1933. It differs by transfer to the 1935 Construction Census of a number of electrical contractors who were embraced in the 1933 Retail Census and by the inclusion in the 1935 Service Census of those electrical shops whose income from repairs was greater than the sale of merchandise. In 1933, only those electrical shops reporting receipts from repairs in excess of two-thirds of total sales were classified as service establishments. Although "Electrical supply stores" as included in the Retail Census ordinarily make electrical repairs and may also do some installation work, their receipts are derived primarily from the sale of lighting fixtures, incandescent lamps, cable, outlets and boxes and similar merchandise.

EATING AND DRINKING PLACES

Restaurants - cafeterias - lunch rooms -- Includes restaurants having full table service, cafeterias or self-serve restaurants, and lunch rooms having limited table service in addition to counter service. Automats are classified as cafeterias. Some combination restaurant-confectionery and restaurant-bakery establishments that derived the majority of their receipts from the sale of meals are included in this classification. In many States the receipts of this restaurant classification include some liquor sales.

Lunch counters, refreshment stands -- This group includes refreshment stands, frequently found on the principal highways and adjacent to factories and office buildings; fountain-lunches, which sell fountain drinks and light lunches; lunch counters with such variations as the street "diner," the hole-in-the-wall eating place and the modern sandwich shop; and soft-drink stands. The eating places in this classification receive no substantial part of their receipts from the sale of meals at tables. This classification also includes a growing number of box lunch companies, their product consisting of a lunch of sandwiches, fruit and dessert, sold ordinarily by street vendors or on regular delivery routes.

Drinking places -- Includes retail establishments whose principal business is the sale, for consumption on the premises, of beer, ale and wine and/or alcoholic liquors (in most States). Drinking places are variously known as bars, beer-gardens, taverns, cafes and otherwise. Although the sales in drinking places frequently include meals, such receipts are a relatively small part of the total. (For the United States as a whole, meal and fountain sales represented 9.0 percent of the total receipts of drinking places in 1935. See Table 7A.) Beer, wine and liquor in glasses for consumption on the premises are often sold in restaurants and other eating places as well as in those places classified as drinking places.

DRUG STORES

Drug stores with fountain -- These stores normally sell, in addition to drugs, prescriptions and fountain items, toiletries, cosmetics, patent medicines, magazines and books, tobacco and novelty merchandise. The sale of sandwiches and light lunches is frequently an important source of receipts. In some States bottled wines and liquors constitute an important part of drug store sales.

Drug stores without fountain -- Two distinct kinds of stores constitute the bulk of this classification. The most important is the so-called ethical or old-line professional drug store where the filling of prescriptions is a principal activity and source of income, and where usually the pharmacist is also the proprietor-owner. The other is the so-called "pineboard" store selling trade-marked packaged drugs and toiletries at cut prices, without service or delivery and without the presence of a pharmacist. A few mail-order drug houses are also included in the classification.

OTHER RETAIL STORES

Bicycle shops -- Includes shops primarily engaged in the retail sale of bicycles, parts and accessories. These shops ordinarily do some repair work; however, if income from repairs exceeds one-half of total receipts, the shop is included in the Service Census. In 1933 bicycle shops were included with "Motorcycle, bicycle and supply dealers" in the "Other automotive" classification. They have been separated because of their revived importance.

Book stores -- This classification covers stores engaged primarily in the sale of books, with stationery and related articles secondary. Included also are subscription book concerns ordinarily selling house-to-house or by direct mail with the majority of sales on an instalment credit basis.

Cigar stores and cigar stands -- This group includes cigar stores with fountain (and lunch), cigar stores without fountain, and cigar stands in pool rooms, bowling alleys, railway stations and other public places. Cigar stores often sell books and magazines and novelty merchandise, cosmetics, and proprietary drug preparations in addition to their more usual merchandise. Packaged liquor is a recent addition in some States. The cigar stand frequently sells soft drinks in addition to the sale of cigars, cigarettes, tobacco and smokers' supplies. Packaged candies and an increasing variety of novelty merchandise are now sold in many cigar stores and stands.

Florists -- This classification is confined to flower shops and does not include stores predominantly engaged in selling seeds, bulbs and nursery stock. Greenhouses are not included. The florist shop sells cut flowers and growing plants, with secondary sale of other merchandise.

Fuel and ice dealers -- This classification includes coal and wood yards, fuel-oil dealers and ice dealers. In a large number of States, many coal and wood yards sell substantial quantities of ice during the summer months, and ice dealers frequently sell coal, wood and sometimes fuel oil during the winter months. Many coal and wood dealers are selling increasing quantities of fuel oil, and some are selling and installing oil-burning equipment. Some ice dealers likewise are selling ice boxes. Those dealers primarily engaged in the sale of fuel oil frequently sell and install oil-burning equipment.

A considerable number of establishments are handling a combination line of coal and lumber and building materials. These were included in the "Fuel and ice dealer" classification if the sale of coal exceeded one-half of total sales.

Gift, novelty, souvenir shops -- This classification includes novelty and souvenir stores and art and gift shops. Gift shops ordinarily sell a variety of gift articles, small art objects, paper novelties, stationery and related merchandise.

Hay, grain and feed stores (without groceries) -- This classification is made up of stores primarily engaged in selling hay, grain and feed. Frequently fertilizer, seed, flour, and small amounts of other merchandise are sold.

Hay, grain and feed stores (with groceries) -- This classification differs from the above primarily in that staple groceries are sold as a secondary line.

Farm and garden supply stores -- Included in this group are stores specializing in seeds and nursery stock, fertilizer dealers, harness shops, coal-and-feed stores, and retail dealers in livestock. Dealers in farm implements are covered in the classification "Hardware and farm implement stores" and not in this group.

Jewelry stores -- This group includes stores selling jewelry primarily, as well as an increasing volume of related merchandise. Income is also derived from repair service and sometimes from optical departments. If receipts from repairs account for more than one-half of total sales, the establishment is included in Service Census. This differs somewhat from the basis of classification used in 1933 when such an establishment was considered a retail store providing more than one-third of its total receipts was from the sale of merchandise.

Luggage stores -- These stores sell trunks, hand luggage, gloves, handbags, pocket books, pass cases, leather belts, etc. Often saddles and other riding equipment are carried, as well as harness.

News dealers -- These stores and stands sell newspapers, current magazines, candy, tobacco, souvenirs and novelty merchandise, including toys. In many instances news dealers sell books and stationery, and often operate circulating libraries. Magazine and newspaper subscription sales offices are not included in the Census, nor are news stands selling only newspapers.

Sporting goods stores -- This classification includes sporting goods specialty stores handling a full line of sporting goods, including gymnasium and playground equipment, sportsmen's equipment, firearms and ammunition; and stores carrying a more restricted line of novelty sporting goods with secondary lines such as toys and stationery.

Beer and liquor stores (packaged) -- These stores specialize in the sale of bottled, or otherwise packaged, beer, ale and wine, and/or in the sale of liquors defined in most States as alcoholic or intoxicating beverages. Some States operate State liquor stores which account for all or a very large part of the sales of this classification in those States. In most such States beer and wine up to a specified alcoholic content are sold under a licensing system independent of State-operated liquor stores. In many States, bottled beer, wine and liquor are sold in quantity in other kinds of stores, including food stores, department stores, cigar and drug stores.

Other classifications -- Under this heading are included various kinds of business not elsewhere classified. Among the kinds of stores in this group are: monument and tombstone works (cutting stone or marble to individual specifications), musical instruments and music stores, opticians and optometrists (retail sales only), stationery stores, office and store supply and equipment dealers, sanitary supplies (insecticides, disinfectants, etc.), rubber goods stores, dealers in chemicals (other than drugs) at retail, dealers in cosmetics and toilet articles and preparations (including perfumes), fireworks (retail sales only), patent medicine dealers, religious goods stores (except book stores) and pet shops.

SECOND-HAND STORES

Second-hand stores - clothing and shoes -- Stores selling primarily second-hand clothing and shoes. Some new merchandise in the lower price lines often is included as well as some small amount of shoe repairing.

Second-hand stores - furniture -- These stores sell second-hand furniture primarily, and occasionally some new furniture in the lower price lines. Stores selling antique-and-used furniture are classified under "Other home furnishings stores."

Second-hand stores - tires, accessories and parts -- Under this classification are included the following stores: those selling second-hand automobile parts and accessories, those selling second-hand tires and batteries, those selling second-hand motorcycles, dealers in used boats and dealers in used aircraft. Sales principally are of second-hand goods, although occasionally new merchandise in the lower price lines is sold.

Pawn shops -- Includes those pawn shops which sell merchandise at retail.

Second-hand stores - other -- This group includes all other second-hand stores, including second-hand building materials and hardware, second-hand office appliances (including typewriters), second-hand musical instruments, radios and phonographs, second-hand book stores, second-hand store fixtures and equipment, and stores selling a general line of used merchandise.

TYPES OF OPERATION

Each retail store is classified as to type of operation, in addition to its kind-of-business classification. Definitions of these types of operation are presented below:

Independents are local, individual enterprises, usually operating a single store but sometimes including two or three similar stores. A few large independents who have developed smaller branches with limited lines, supplied from the stocks of the parent store rather than from central warehouses, are classified as local branch systems.

Chains are groups of 4 or more stores in the same general kind of business, owned and operated jointly, with central buying, usually supplied from one or more central warehouses. The count of units does not include the warehouses nor buying offices maintained apart from the stores. Chains are local if substantially all of their stores are located in and around some one city; sectional if in only one part of the country; national if in more than one section or geographic division of the country.

Ownership Groups of department stores are not classed as chains if they are not centrally merchandised. Although centrally owned, the several stores of most ownership groups are individually operated and their buying is done by local buying staffs, almost entirely independent of the central organization. These stores are classified as "independents" in the type-of-operation classifications.

Leased Departments are sections of a store operated by an outside independent or chain, rather than by the store itself. So-called rent, or the compensation to the store, may be a flat amount or a percentage of sales, which typically includes many store services in addition to occupancy of lighted, heated and fixtured space.

Utility-operated stores are sales rooms or separate stores of gas and electric utility companies, primarily for the sale of household appliances that increase the power load.

Mail-order houses are places of business confined to the sale of merchandise by mail, from catalogues. Retail stores owned by the same company, whether located in the same building or separately, are properly classified as chain units.

Direct selling (house-to-house) consists primarily of central offices or multi-unit headquarters of crews of canvassers who sell from door to door.

State liquor stores are State-owned liquor stores, operated as a monopoly by State liquor boards (or sometimes by counties or municipalities).

Military post canteens are privately-operated eating places or stores, at army posts and naval stations. Commissaries and post exchanges operated directly by any branch of the Service are excluded.

Commissaries or company stores, found principally in lumbering and mining communities, are operated by the industrial concerns primarily for the benefit or convenience of their employees.

Unclassified types include consumer cooperatives, rolling stores, itinerant vendors, market stands and roadside stands.

DEFINITION OF TERMS

Stores -- Places of business predominately retail in character, in and from which goods are sold to ultimate consumers for consumption or utilization. The number includes filling stations, garages, market stands, lumber and coal yards, eating and drinking places, mail-order houses, district offices of house-to-house canvassers, and leased departments, in addition to retail places of business commonly known as stores.

Sales -- The term sales means total operating receipts of retail stores, after deduction of refunds or allowances for merchandise returned by customers. Sales taxes are included.

Each respondent was asked to provide a breakdown of sales into as many of the four following sources of receipts as were applicable to the particular business: (a) merchandise sales, (b) sale of meals, and fountain receipts, (c) repairs, storage, and other service sales, and (d) receipts from other sources.

Receipts from other sources -- Incidental income, which in 1935 amounted to 0.5 percent (1/2%) of reported sales, is derived from such sources as leased department rental, concessions, cash discounts on equipment purchases, bank interest and other sources not directly involving the purchase and sale of merchandise.

Open-account sales -- Sales on open-account represent the total sales made on open book, or charge account basis. The figure reported does not represent the amount of open-account credit outstanding.

Installment sales -- All sales of goods on deferred credit with definite provision for payment of the obligation in periodical instalments or portions. This includes so-called budget payment plans. Down-payments, whether in the form of cash or a trade-in-allowance, are included as a part of the total sales on installment. The respondent was requested to report installment sales financed through finance companies or other third parties as installment sales and not as cash sales, even when cash proceeds were received by the store immediately upon consummation of sale.

Cash and C.O.D. sales -- Includes all sales in which the customer paid cash at the time of purchase or upon the delivery of the merchandise by the store deliveryman, or common carrier. C.O.D. means cash on delivery.

Active proprietors and firm members -- Proprietors or partner-owners of unincorporated businesses devoting the major portion of their time to the operation of the business. They are not included in the count of employees, nor is their compensation included in pay roll. Corporate officers and executives of corporations are classified as employees, not as proprietors or firm members.

Employees -- The number of full-time and part-time paid employees, including salaried corporation officers and executives. Active proprietors and firm members are not included in the count of employees. The average number of employees (full-time and part-time) for the year is obtained by totalling the number reported monthly (for the pay period ending nearest the 15th of each month) and dividing the sum by 12.

Full-time and part-time employees -- The Census defines a full-time employee as one regularly engaged for work for four or more hours per day or for more than three full days per week. Employees working on a full-time basis but for only a part of the year were to be reported as full-time employees for the months during which they worked. All other employees were reported as part-time workers.

Pay roll -- The total compensation (salaries, wages, commissions and bonuses) paid to all employees. This item does not include compensation for proprietors and firm members of unincorporated businesses.

Employment and pay roll by occupational groups -- In order to obtain a measure of full-time and part-time employment and an analysis of retail employment and pay roll by occupational classes, each respondent having employees was asked to classify them by occupational groups, full-time and part-time separately. Data on the number of employees and pay roll for one week were obtained for the following groups: executives and salaried corporation officers; office and clerical employees; selling employees (other than waiters and waitresses); waiters and waitresses; and other employees. Where an employee performed a variety of functions and thus could be classified in more than one group, he was reported on the basis of the function requiring the major portion of his time in 1935.

Executives and salaried corporation officers -- This group includes salaried officers of corporations, such as president, vice-president, secretary and treasurer, and non-owner paid employees of single proprietorships or partnerships working in the same capacity as corporation officers. In addition, this group includes other hired executives such as merchandise managers, credit managers, controllers, department heads or buyers, and others who devote the major portion of their time to responsible administrative and supervisory duties.

Office and clerical employees -- This classification includes bookkeepers, cashiers, accountants, stenographers, office secretaries and other so-called "white-collar workers," except salespeople.

Selling employees -- Included under this group are all employees who devote the major portion of their time to the actual selling of merchandise or service over the counter, by house-to-house canvass, by telephone, or by correspondence. In departmentized stores the respondents were requested to report as selling employees all employees carried on the pay roll of the selling departments, except heads of departments and other persons with administrative or supervisory responsibility. Waiters and waitresses were reported as a separate group, not included under selling employees.

Waiters and waitresses -- This group includes those persons primarily engaged in the serving of food or drinks. Generally these employees rely to some extent upon "tips" as compensation in addition to their wages. Fountain employees are classified in this group.

Other employees -- In general, two types of employees are included under this group: (a) those whose duties or functions are of such a nature that they could not properly be classified in any one of the other groups (for example, maintenance employees, elevator operators, delivery-truck drivers, etc.); (b) those performing functions falling within two or more of the classifications described above, with no one function dominating.

Representative week -- For the purposes of reporting employees and pay roll by occupational classes, the week ending October 26, 1935, was selected as fairly representative for retail trade. In some cases, however, where another week was considered more representative, data covering that period were reported.

Operating expenses -- Includes pay roll and other operating expenses such as rent, interest on current debt, traveling expenses, advertising, taxes, insurance, light, heat, power and all other overhead costs. Compensation for proprietors and firm members of unincorporated businesses is not included. The cost of the goods sold is not included as operating expense, nor is income tax included.

Stocks on hand -- Represents the cost value of merchandise stocks on hand as of December 31, 1935, or nearest inventory date.

Net profit -- Business Census reports definitely do not provide data for the determination of net profit. In any estimate of profit it is necessary to take into consideration (1) that the amount reported as sales includes sales tax, but operating expenses do not include such taxes; (2) that interest on invested capital and at least some depreciation of plant and equipment are excluded from reported operating expenses; (3) that neither the clerk value nor the administrative or managerial value of the services of proprietors and firm members of unincorporated businesses are included in the reported pay roll expense, although these owners devote all or the major portion of their time to the business; (4) State and Federal income taxes are not included as operating expenses; (5) in the case of chains some of the central office and warehouse expenses are not included in reported store operating expense, but are available in a separate tabulation; (6) both operating expense and profit can come only from the margin realized between the net sales price and the cost of replacing the goods sold plus depreciation in the value of goods remaining unsold. The cycle of a continuing retail business does not conclude with the sale of goods, but necessarily continues on to the replacement of those goods for the next sale.

The 1929 Retail Census in its major tables used 167 kind-of-business classifications, which were consolidated in the 1933 Census into 52 groups. In the Census of Business for 1935, 66 kind-of-business classifications are shown. These 66 classifications are consolidated in some tables into 11 business groups.

Types of operation were shown in the 1929 Census in 23 classifications which were condensed to 7 in 1933. In the current 1935 census, 8 types of operation are shown in the State tables and 16 in the United States Summary.

Following is a comparison of the classifications in 1935, and corresponding classifications in 1933 and 1929.

DESCRIPTION OF THE TABLES

Table 1 -- Basic statistical data for 1935, concerning the number of stores, amount of sales, number of proprietors, average number of employees for the year, amount of full-time and part-time pay roll, and operating expenses. Table 1A presents the information by kinds of business. Similar tables for each State and for each city of more than 500,000 population are contained in Volume III. Table 1B presents the same information by States.

Table 2 -- Shows employment in retail trade by months. Table 2A shows this information by kinds of business. Two Tables 2B are shown summarizing monthly employment data by geographic divisions and States; one shows the actual number of employees by months and the other presents monthly employment as percentages of the average employment for the year. Table 2 for each State and each city of more than 500,000 population is contained in Volume V.

Table 2C contains employment and pay roll data by occupational groups for the week ending October 26, 1935, or other representative week. It provides a division of retail employees into full-time and part-time, and the division of employment by occupational classes. United States summaries of this data by kinds of business and by States are shown in this volume. A Table 2C for each kind of business group and for selected kinds of business is contained in Volume V.

Table 3 -- Analysis of basic data by types of operation, (independents, chains, mail-order, direct-selling and other types) showing the number of stores, amount and proportion of sales, number of proprietors, number of employees, full-time and part-time pay roll and total operating expenses for 26 kinds of business and for all retail business in the United States. Similar tables for each State and each city of more than 500,000 population are contained in Volume IV, which also contains a separate table for each of the 26 kinds of business, showing by States the number of stores and amount of sales for independents, chains, and "all other types."

Table 4 -- Analysis of retail trade by size-of-business groups. A separate Table 4 is shown in Volume VI for each kind of business and each business group, showing number of stores and amount of sales by size groups by States. Chain and mail-order units are not included in these tables. Table 4C, also contained in Volume VI, presents a further breakdown of the less than \$5,000 sales group for selected kinds of business.

Table 4A shows the number of stores and the amount of their sales (exclusive of chain and mail-order units) by kinds of business, while table 4B presents the same data by States and geographic divisions.

Table 4D shows number of stores and amount of sales of stores with 1935 sales of less than \$5,000 (exclusive of chain and mail-order units) by kinds of business, while 4E presents the same data by States and geographic divisions.

The stores whose sales volume exceeds \$300,000 are further analyzed by size in Table 4F in which information is given separately by kinds of business.

Tables 4G and 4H present United States summaries of chain and mail-order units by kinds of business.

Table 5 -- Presents a credit-cash analysis of retail sales, showing for the stores reporting on this inquiry, the amounts of open-account, instalment and cash sales. Table 5A is a United States summary of this information by kinds of business. Similar tables for each State are contained in Volume VI.

Table 6 -- Provides basic data for stores operated by Negro proprietors. Table 6A presents the information by kinds of business and Table 6B by States.

Table 7 -- Analysis of sales to show separately the receipts from sale of merchandise, sale of meals and from fountain, repairs, storage and service receipts and other sources. Also includes columns showing the amount of sales by retailers to other retailers, and stocks on hand at the end of the year (at cost). Table 7A presents this information by kinds of business and Table 7B by States. Tables similar to 7A for each State and each city with more than 500,000 population are contained in Volume VI.

Table 8 -- Retail sales by wholesale establishments. Contains a summary of sales to ultimate consumers by wholesalers divided into (1) Sales by full-service and limited-function wholesalers, and (2) Sales by other types of wholesale establishments. Table 8A presents this information by kinds of business (wholesale classifications) and Table 8B by Geographic Divisions. Tables similar to 8A for each geographic division may be found in more detail in Volume VII of the Wholesale Census reports.

Table 9 -- Summary of receipts of service establishments as presented in the Service Census reports. It shows an analysis of the receipts from merchandise sales, service sales, and from other sources. Table 9A shows the information by kinds of business (Service Census classifications) and Table 9B by States.

Table 10 -- Retail distribution by areas. Table 10, shown for each State in Volume III, presents the number of stores and amount of sales by 11 kind-of-business groups for each county, city and other incorporated place of more than 2,500 population, and the remainder of each county. Table 10A summarizes this same information by States and geographic divisions.

Table 11 -- This table, shown for each State in Volume II, presents the number of stores, their sales, the number of proprietors, number of employees and their total pay roll for every county, city and other incorporated place of more than 2,500 population, and the remainder of each county. Table 11A gives city totals for the same data for cities of 10,000 to 50,000 population including 40 New England "towns," for which 1933 comparable data are available.

Table 12 -- Cities of more than 50,000 population. This table, shown for each of these cities in Volume II, contains data on the number of stores, sales, proprietors, employees and pay roll by 54 kinds of business. Table 12A gives one-line city totals of the same information for all kinds of business combined.

Table 13 -- Cities of 10,000 to 50,000 population. This table, shown for each of these cities in Volume II, presents the number of stores, their sales, proprietors, employees and pay roll by 12 kind-of-business groups.

City-Size Tables -- This series of tables numbered from 13A to 14B, inclusive, present retail trade data by size of city. Table 13A shows the proportion of stores and sales, for eleven business groups, by city-size groups. Table 13B shows the percent of retail business done by each business group in each city-size group. Table 13C presents the percent of stores, sales and population by city-size groups.

Table 13D gives the number of stores and amount of sales, by kind-of-business groups for the United States and geographic divisions, by city-size groups.

Table 14A shows the proportion of stores, sales, personnel and pay roll (for all kinds of business combined) by city-size groups. Table 14B presents by city-size groups the number of stores, sales, personnel and pay roll for the United States and geographic divisions.

RETAIL DISTRIBUTION

VOLUME II

COUNTY AND CITY SUMMARIES

DECEMBER, 1936

UNITED STATES DEPARTMENT OF COMMERCE

Daniel C. Roper, Secretary

BUREAU OF THE CENSUS

William L. Austin, Director

CENSUS OF BUSINESS

Fred A. Gosnell, Chief Statistician

William A. Ruff, Assistant

This is a summary of retail distribution by all types and kinds of business (combined) for each State, and for each county, city and place of more than 2,500 population and remainder of each county. It corresponds to Retail Vol. III (Table 11) of the 1933 Census of American Business and to Retail Vol. I (Table 13) of the 1929 Census of Distribution.

Included also are two series of City tables, alphabetically arranged, one showing the same information by 54 kinds of business for each city of more than 50,000 population (Table 12) and one by 11 or 12 business classifications for each city of 10,000 to 50,000 population (Table 13). Table 12 corresponds to Retail Vol. III (Table 12) of the 1933 census. There was no series similar to Table 13 in the 1933 census, although the number of stores and sales by 11 business groups can be found in Vol. VIII (Areas) for each of these cities, listed under their respective counties. Separate tables for each city of more than 30,000 population were contained in Vol. I (Parts II and III) of the 1929 Distribution Census under their respective States.

All areas in each State are also grouped into 11 city-size classifications, by 11 business groups, corresponding to similar summary tables in Retail Vol. I of the 1933 census, pages 45 to 54.

For data on the number of stores and sales in each county and city by 11 business groups, see Retail Vol. III of the 1935 Census of Business.

The facts on which these tables are based were collected in 1936 by a complete canvass of retail stores in every State, city and county in the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration. They represent the operations of retailers during the year 1935. They were tabulated, analyzed and published by the Business Census division, in the Bureau's branch in Philadelphia.

Retail reports are prepared under the supervision of John Guernsey, Distribution Economist for the Census Bureau, by Ira D. Anderson, Retail Assistant, Hugh Duffey, James O. Reid and Irwin Heine.

RETAIL DISTRIBUTION: 1935VOLUME II - COUNTY AND CITY SUMMARIES

This volume, which presents summary data by areas showing the number of stores, amount of sales, number of proprietors, average number of employees, and the amount of total payroll, is in two parts.

The first consists of Table 11 with the above-described data for each State, each county, each city of more than 2,500 population, and the remainder of each county. (Pages 13 to 84).

The second part consists of Table 12 which presents in alphabetical order all cities of more than 50,000 population with the above-described data analyzed by 54 kinds of business (pages 114 to 179); and Table 13 which presents in alphabetical order all cities of 10,000 to 50,000 population with the above-described data analyzed by 11 business groups (pages 180 to end).

Because of the danger of disclosures it is not possible to present the same detail by kinds of business in smaller cities, but a uniform grouping of stores for all cities of more than 2,500 population is available in Volume III, showing data as to the number of stores and volume of sales only, by 11 business groups.

Contained in this volume are two comparison tables of one-line totals for each city of more than 50,000 population (pages 107-108) and for each city of 10,000 to 50,000 population (pages 109 to 113), in both of which the cities are alphabetically listed.

The population figures, given in Table 11 for each city, are as of April 1, 1930. Although the Bureau of the Census has prepared estimates of population by States as of July 1, 1936, the figures for 1930 have been used throughout because the table includes cities and incorporated places for which no population figures later than 1930 are available.

Stores

The number of stores used herein is the number of places of business predominantly retail in character, in or from which goods are sold to ultimate consumers for consumption or utilization. The number includes filling stations, garages, market stands, lumber and coal yards, eating and drinking places, mail-order houses, district offices of house-to-house canvassers, and leased departments, as well as stores.

Sales

Sales figures used herein represent total sales of retail stores in each designated area during the year 1935. They should not be confused with total retail purchases or "buying power" of the population of such areas. Many cities attract to their stores a considerable volume of business from residents of other communities; likewise the residents of few, if any, communities limit their entire purchases to local stores. It is unsound, therefore, to use the total sales of the stores of any given area as the basis for computing so-called per capita sales of such area.

Sales include the sale of merchandise and meals (together with incidental repairs and services), both on credit and for cash. Sales taxes are included. Sales are net, in that returned goods have been deducted.

Proprietors

The number of proprietors is the number of owners or partners of unincorporated businesses devoting a major portion of their time to the operation of their stores. The number does not include executives of corporations, who are classified as employees and whose compensation is included in pay roll. The great majority of proprietors are found in the very small stores with less than \$10,000 of annual sales, and in such stores take the place of salespeople, in addition to performing managerial functions. Proprietors should be included with employees in any count of persons actively engaged in retailing, and a reasonable compensation for their services should be added to reported expense.

Employees

The employment figures used herein represent the average number of full-time and part-time employees (combined), computed by averaging the twelve monthly employment figures reported to the Census. The monthly figures in detail may be found in a separate volume of this final series of retail reports, in which employment is analyzed in considerable detail.

Payroll

Payroll is the total compensation (salaries, wages, bonuses and commissions) paid to employees during the year. It includes no compensation for proprietor-owners. The average annual earnings of full-time employees cannot be determined by dividing the total payroll by the average number of employees, because it is not possible to determine from the figures how many of the reported employees are on a part-time basis.

For more data on this subject, see separate volume of the Retail series on Employment and Pay Rolls.

Terms and Classifications

The various terms and classifications used throughout this volume are described in the United States Summary, Volume I of this final series.

* - Pay roll includes no compensation for proprietors of unincorporated businesses. Number of employees includes full-time and part-time (combined). NOTE. Comparable Area figures for 1933 were published by the Bureau of the Census in Retail Volume III, entitled "County and City Summaries", part of the Census of American Business of 1933, available in most libraries. 3/ Berlin is in Green Lake and Waushara Counties. 4/ New London is in Outagamie and Waupaca Counties.

RETAIL DISTRIBUTION: 1935SECTION TWO - CITY TABLES

The remainder of this volume is divided into four parts, as follows:

1 - City-size summaries - Stores and sales arranged in 11 business groups, further analyzed by 11 city-size groups, for the United States, for each geographic division and separately for each State (pages 87 to 97).

2 - City-size summaries - All kinds of business combined - Stores, sales, personnel, pay roll and expenses (except proprietors' compensation), analyzed by 11 city-size groups, for the United States, for each geographic division and separately for each State (pages 99 to 106).

3 - One-line city summaries of all stores in each city of more than 10,000 population, showing stores, sales, personnel and pay roll in total for each city, alphabetically arranged in two groups as follows:

All cities of more than 50,000 population (pages 107 and 108).

All cities of 10,000 to 50,000 population (pages 109 to 113).

4 - Separate city tables for each city of more than 10,000 population, showing stores, sales, personnel and pay roll by kinds of business as follows:

Each city of more than 50,000 population, analyzed by 54 kinds of business (pages 114 to 179).

Each city of 10,000 to 50,000 population, analyzed by 11 business groups (pages 180 to end).

All size classifications are based on the population figures of 1930.

For a more-detailed analysis of retail trade in the 13 cities of more than 500,000 population, see Vol. III, pages 62 to 78. For Washington, D. C., which is co-extensive with the District of Columbia, see Vol. III, page 20.

An alphabetical index of all cities in the United States of more than 10,000 population is contained on pages 6 to 8 of this volume.

PROPORTION OF STORES AND SALES FOR ELEVEN BUSINESS GROUPS, BY CITY-SIZE GROUPS

Percent Ratio of Each City-Size Group to United States Totals

Reproduced from Retail Volume 1 of the 1933 Census of Business.

CITY-SIZE GROUP	POPULATION 1950	TOTAL		FOOD STORES		EATING PLACES		FARMERS' SUPPLIES AND COUNTRY GEN. CENSUS OF BUSINESS

Fred A. Gosnell, Chief Statistician

William A. Ruff, Assistant

This volume contains a series of tables, supplementing Volume II, of all retail stores reported in the Census of Business for 1935, grouped into 11 business classifications, showing by States the number of stores and volume of sales in each county, city and place of more than 2,500 population, and the remainder of each county. It corresponds to Retail Vol. VIII (Areas) of the 1933 Census of American Business and to Retail Vol. I (Table 14) of the 1929 Census of Distribution.

Included also is a series of summary tables, showing the number of stores, sales, personnel, pay roll and expenses by detailed kinds of business for each State as a whole and for each city of more than 500,000 population. Particularly helpful is the comparison table on page 81.

The facts contained herein were collected by a complete field canvass of retail stores in every State, city and county in the United States, by the Bureau of the Census, with funds provided by the Works Progress Administration. They represent the operations of retailers during the year 1935.

Retail reports are prepared under the supervision of John Guernsey, Distribution Economist for the Census Bureau, by Ira D. Anderson, Retail Assistant, Hugh Duffey, James O. Reid and Irwin Heine.

RETAIL DISTRIBUTION: 1935MARKETING SUMMARY

The number of stores and their sales presented herein by areas are from the 1935 Retail Census, a part of the Census of Business. In the course of examining and testing the individual schedules for accuracy and completeness, they were classified and coded in 66 business classifications (see page 11). These 66 detailed classifications are consolidated and tabulated in 11 business groups by areas, for this marketing summary (pages 82 to 278).

In addition to the breakdown of each State by areas, there is included herein a series of State summary tables, presenting the final totals for the 66 kinds of business for each State (pages 13 to 61) and for each city of more than 500,000 population (pages 62 to 78).

In a companion volume (Vol. II) are shown, in addition to stores and sales, the total number of proprietors and employees and the total payroll of all stores combined, for each State, county, city or place of more than 2,500 population and remainder of each county.

Areas are classified according to the population figures of 1930. Although the Bureau of the Census has prepared estimates of population by States subsequent to 1930, no official estimates for the smaller areas are available. An estimate of population by States by years (1930-1936) is shown on page 80.

Comparability with 1933

The 11 principal classifications used herein, as described below, are comparable to those used in the 1933 census (Retail Vol. VIII - Areas) with three exceptions:

1 - Whereas in 1933 the group called "Farmers' supplies and country general" included hay, grain and feed stores, fertilizer dealers, harness shops, seed stores and other farm and garden supply stores in addition to country general stores, only the latter (called "General stores") are included in 1935. The others are included in "Other Stores".

2 - Whereas in 1933 the 3,767 beer and liquor stores then in existence were included with food stores, and their sales of \$16,730,000 were included in food store sales, in the area tables for 1935 beer and liquor stores are included in "Other stores". They are shown separately by States in the State Summary tables (pages 13 to 61) and for cities of more than 500,000 population (pages 62 to 78).

3 - A negligible number of retailers exclusively of fuel oil for domestic household consumption were included with filling stations, in the 1933 census. In the area tables for 1935, such fuel-oil dealers are included with "Other Stores". They are combined with coal and ice dealers as "Fuel and ice dealers" in the State summary tables.

Composition of Each Business Group

Retail distribution, as covered in this Census, is the process of purveying goods to ultimate consumers for consumption or utilization, together with services incidental to the sale of goods. The function of the retailer is primarily to anticipate the wants of the consumer and to make available, at the right time and at a convenient place, a reasonable selection of goods capable of satisfying those wants. The distinguishing characteristic of a retailer is that the business is done in a retail manner, in a place of business open to the general public.

The business classifications, although usually related broadly to the kind of merchandise carried, are not interchangeable with commodity classifications. For instance, grocery store sales are not exclusively sales of groceries; apparel stores sell accessories and shoes in addition to outer apparel; drug stores sell many lines other than drugs. Stores are classified according to their principal commodities or according to their popular designation. Dual-line stores, which could fall into more than one classification, are classified according to the kind of business which is the more important in terms of sales.

Food stores include 11 classifications shown in detail in the State summaries (pages 13 to 61) as follows:

Candy and confectionery stores	Combination stores (groceries and meats)
Dairy products stores (including milk dealers)	
Egg and poultry dealers	Meat markets
Delicatessen stores	Fish markets - seafood
Fruit stores and vegetable markets	Bakeries and caterers
Grocery stores (without meats)	Other food stores

The classification "Bottled beer and liquor stores" which appeared in this group in the 1933 census is now included with "Other stores".

Eating and drinking places consist of restaurants, cafeterias, lunch rooms, lunch counters, refreshment stands and drinking places. Sales of the latter frequently include meals. Beer, wine and liquor in glasses, for consumption on the premises, are often sold in restaurants and other eating places as well as in those places classified as drinking places.

General stores (also called country general stores) are general merchandise stores which also sell a substantial proportion of foods. They are located typically but not exclusively in the smaller communities. In the 1929 census the food proportion of country general store sales, based upon a sample described in the reports of that census, varied from an average of 54 percent to 67 percent. No commodity analysis was available in 1933.

General merchandise group consists of department stores, variety (5-and-10 and limited price) stores, dry goods stores and general merchandise stores. The latter are stores selling a general line of merchandise in which food, if any, is a negligible item. General merchandise stores selling a substantial quantity of food are classified as general stores, regardless of where located. General merchandise stores exceeding \$100,000 in annual sales are classified as department stores. The distinction between department stores and dry goods stores is that department stores sell a greater variety of merchandise than merely dry goods and women's apparel, usually including furniture or other household lines and men's lines, whereas dry goods stores appeal primarily or exclusively to women customers. A dry goods store becomes a department store if, and when, it adds furniture, household appliances, hardware and/or men's clothing and furnishings, provided its total sales exceed \$100,000. If its sales are less than \$100,000 per year it becomes a general merchandise store.

Apparel group includes the following classifications found in the State summaries:

Men's furnishings stores	Furriers and fur shops
Men's clothing and furnishings stores	Millinery stores (including leased
Family clothing stores (men's,	millinery departments)
women's and children's)	Custom tailors
Women's ready-to-wear specialty stores	Accessories and other apparel stores
Shoe stores	

The classification "accessories and other apparel stores" includes corset and lingerie shops, hosiery shops, children's specialty shops, infants' wear shops, and mail-order houses engaged exclusively in the sale of apparel.

Automotive group (except filling stations) includes motor-vehicle dealers, used-car dealers, automobile accessories, tire and battery stores, repair garages, and other automotive retailers, including those selling air-planes and parts, boats (motor boats, yachts and canoes) and trailers.

Filling stations are retailers primarily of gasoline and oil for the operation of motor vehicles. While gasoline and oil constitute their principal commodities, they may sell also such related commodities as tires, batteries and automotive accessories, and may operate lunch counters and tourist camps. Retailers exclusively of fuel oil for domestic household consumption are not included, but are classified as Fuel dealers and included with "Other stores". Tourist camps whose principal revenue is derived from room rentals and/or the sale of meals, whether or not they sell gasoline and oil incidentally, are included in the Census of Service Establishments and not in the Retail Census. In addition to filling stations, there are other retailers of gasoline and oil whose principal business places them in other classifications, such as grocery stores, farmers' supply stores and country general stores.

Furniture-household-radio group consists of five classifications found in the State summary tables as follows:

Furniture stores	Household appliance and radio stores
Floorcoverings, drapery, curtain	Radio dealers
and upholstery stores	(not selling household appliances)
Other home furnishings stores	

Household appliance and radio stores are those whose principal business is the sale of electric or gas household appliances such as refrigerators, ranges, washing machines, vacuum cleaners, and other electrical appliances, or such appliances in combination with the sale of radios. Many stores in this classification are operated by gas and electric utility companies, primarily for the sale of appliances intended to increase the consumption of their gas and electricity.

Radio dealers are those principally engaged in the sale and care of radios, who do not also sell household appliances. Radio repair shops whose principal revenue is derived from services rather than sales are shown in the Service Census and not in the Retail Census.

The classification "other home furnishings stores" is identical with a similar classification in previous retail censuses and includes aluminumware and brush can-vassers, antique dealers, lamp shops, etc.

Lumber-building-hardware group contains six classifications described in detail in the State summary tables as follows:

Lumber and building-material dealers	Heating and plumbing equipment dealers
Hardware stores	Paint, glass, wallpaper stores
Hardware and farm implement dealers	Electrical supply stores

In using any of these classifications for market analysis it should be taken into consideration that it is extremely difficult to draw the line between whole-

salers and retailers, particularly in the lumber and building-material field and to the lesser extent in the hardware field. If a dealer reports that he does more than 50 percent of his business at wholesale he is classified in total in the Wholesale Census, which sets out separately as related data the amount of his retail business, but does not deduct it from the dealer's total sales. Such retail sales of wholesalers (or those selling more at wholesale than at retail) do not appear anywhere in the Retail Census. Likewise, dealers doing some but not 50 percent of their business at wholesale appear in total in the Retail Census. In this particular field it is essential that both Wholesale and Retail data be taken into consideration.

The classification "Heating and plumbing equipment dealers" is not identical with the "Heating and plumbing stores" classification in the 1933 reports; nor is the classification "Electrical supply stores" identical with "Electrical shops" of 1933. Both differ by the inclusion in the 1935 Service Census of those electrical shops whose income for services was greater than the sale of merchandise, and by the inclusion in the 1935 Construction Census of some heating, plumbing and electrical contractors who were embraced in the 1933 Retail Census. Changes in the nature of the business resulting from renewed activity in home construction and repairs accounts for many of the shifts in classification. Under such circumstances a true measure of the status quo in 1935 is considered to outweigh the value of true comparability.

Drug stores include those with and without fountains (classified separately in the State summary tables) as well as leased drug departments in other stores, and direct-mail retailers of drug items.

Other stores group, in addition to including beer and liquor stores (packaged alcoholic beverages) combines the following classifications which are shown separately in the State summary tables (pages 13 to 61):

Bicycle shops	Farm and garden supply stores
Book stores	Jewelry stores
Cigar stores and cigar stands	Luggage stores
Florists	Newsdealers
Fuel and ice dealers	Sporting goods stores
Gift, novelty, souvenir shops	Others not specifically
Hay, grain and feed stores (without groceries)	included elsewhere
Hay, grain and feed stores (with groceries)	Second-hand stores

Comparison with 1933 and 1929

Following the area tables are three pages (pages 279-281) containing summary tables by States by the 11 business groups, for 1935, 1933 and 1929 respectively, with the figures for the two previous years adjusted to substantial comparability with the 1935 census.

UNITED STATES SUMMARY

TABLE 1-A. STORES, SALES, PERSONNEL, PAY ROLL AND EXPENSES,
BY DETAILED KINDS OF BUSINESS

Kind of Business	Number of stores	Sales (add 000)	Active proprietors and firm members	Employees (full-time and part-time). Avg. for year	Pay Roll* (add 000)			Operating expenses, (including pay roll)* (add 000)

RETAIL DISTRIBUTION: 1935SECTION TWO - AREA TABLES

The principal contents of this Section comprise a series of tables showing the number of stores and volume of sales in each county throughout the United States, and for each city of more than 2,500 population, and for the remainder of each county, arranged in 11 business groups. The several detailed kinds of business making up each business group are described on pages 7 to 10 of this volume.

Included in this Section (page 81) is a convenient summary table of the retail censuses of 1935, 1933 and 1929, comparing by States and geographic divisions the following data:

Number of stores, amount of sales, percent change in sales from one census year to another, ratio of each State's sales to total sales, number of employees and amount of total pay roll.

Included also are three summary tables (pages 279 to 281), for the years 1935, 1933 and 1929 respectively, comparing the number of stores and amount of sales by States and geographic divisions.

ESTIMATED POPULATION BY STATES, JULY 1, 1930 TO JULY 1, 1936

For convenience in making certain computations and comparisons by States, there is shown below an estimate prepared by the Bureau of the Census as of July 1 of each year 1930-1936, incl.

Division and State	Census population, April 1, 1930	Estimated Population						
		July 1, 1930	July 1, 1931	July 1, 1932	July 1, 1933	July 1, 1934	July 1, 1935	July 1, 1936
